## BenQ

## Product Service Manual - Level II

## Service Manual for BenQ: G2420HD

P/N: 9H.L3ALB.QBx
Applicable for All Regions

Version: 001
Date:2009/05/26

## Notice:

- For RO to input specific "Legal Requirement" in specific NS regarding to responsibility and liability statements.
- Please check BenQ's eSupport web site, http://esupport.benq.com, to ensure that you have the most recent version of this manual.

## Abbreviations \＆Acronyms

## 1 About This Manual

This manual contains information about maintenance and service of BenQ products．Use this manual to perform diagnostics tests，troubleshoot problems，and align the BenQ product．

## 1．1．Trademark

The following terms are trademarks of BenQ Corporation：

## BenQ

## Importance

Only trained service personnel who are familiar with this BenQ Product shall perform service or maintenance to it．Before performing any maintenance or service，the engineer MUST read the＂Safety Note＂．

## 2 Introduction

This section contains general service information，please read through carefully．It should be stored for easy access place for quick reference．

## 2．1．RoHS（2002／95／EC）Requirements

## －Applied to all countries require RoHS．

The RoHS（Restriction of Hazardous Substance in Electrical and Electronic Equipment Directive） is a legal requirement by EU（European Union）for the global electronics industry which sold in EU and some counties also require this requirement．Any electrical and electronics products launched in the market after June 2006 should meet this RoHS requirements．Products launched in the market before June 2006 are not required to compliant with RoHS parts．If the original parts are not RoHS complaints，the replacement parts can be non ROHS complaints，but if the original parts are RoHS compliant，the replacement parts MUST be RoHS complaints．
If the product service or maintenance require replacing any parts，please confirming the RoHS requirement before replace them．

## 2．2．Safety Notice

1．Make sure your working environment is dry and clean，and meets all government safety requirements．
2．Ensure that other persons are safe while you are servicing the product．DO NOT perform any action that may cause a hazard to the customer or make the product unsafe．
3．Use proper safety devices to ensure your personal safety．
4．Always use approved tools and test equipment for servicing．
5．Never assume the product＇s power is disconnected from the mains power supply．Check that it is disconnected before opening the product＇s cabinet．
6．Modules containing electrical components are sensitive to electrostatic discharge（ESD）． Follow ESD safety procedures while handling these parts．
7．Some products contain more than one battery．Do not disassemble any battery，or expose it to high temperatures such as throwing into fire，or it may explode．
8．Refer to government requirements for battery recycling or disposal．

## 2．3．Compliance Statement

Caution：This Optical Storage Product contains a Laser device．Refer to the product specifications and your local Laser Safety Compliance Requirements．

## 2．4．General Descriptions

This Service Manual contains general information．There are 3 levels of service：
Level 1：Cosmetic／Appearance／Alignment Service
Level 2：Circuit Board or Standard Parts Replacement
Level 3：Component Repair to Circuit Boards

## 2．5．Related Service Information

## 3 Product Overview

## 3．1．Specification

## 3．1．1 Introduction

G2420HD is defined $24^{\prime}$ W LCD Monitor supports WXGA（1920x1080）resolution with DPMS （Display Power Management System）and Senseye function．There are three different input types，
D－sub，DVI and HDMI，of models．G2420HD adopts AUO panel，M240HW01 V2．
The features summary is shown as below，
＊All panel spec．in service manual definition depends on the variance of panel source．
＊All spec．of monitor need to warm up at least 1 hr ．
＊To test the＂Contrast Ratio＂and＂Luminance＂functions，the color status must be＂User preset＂ mode．
1．＂Contrast Ratio＂：Set＂brightness＂at 100，and＂contrast＂at 50.
2．＂Luminance＂：Set＂brightness＂at 100，and＂contrast＂at 100.

| Feature items | Specifications | Remark |
| :---: | :---: | :---: |
| Panel supplier \＆module name | AUO M240HW01 V2 | TN，Normally white |
| Screen diagonal | 24W＂ | 609.7 mm |
| Display Format | 531．36（H）$\times 298.89(\mathrm{~V})$ | Panel Display information |
| Pixel Pitch | $0.276 \mathrm{~mm} \times 0.276 \mathrm{~mm}$ | per one triad |
| Viewing Angle（＠Contrast Ratio＞＝10） | R／L：85／85 degrees（typ） and U／D：80／80 degrees （typ） |  |
| Analog interface with Scaling supported | Yes | With 15－pin D－sub connector |
| DVI interface with Scaling supported | Yes |  |
| HDMI interface with Scaling supported | Yes |  |
| Max resolution mode supported | 1920 （H）x 1080（V）＠60Hz |  |
| Number of Display Colors supported | 16．7 Millions | RGB 6－bit＋FRC |
| Contrast Ratio | 1000：1（typ．），600：1（min） | Test Condition：Set Contrast at 50，Brightness at 100，Color at User preset |
| Luminance | $\begin{aligned} & 300 \mathrm{~cd} / \mathrm{m}^{2} \text { (typ.), } 240 \mathrm{~cd} / \mathrm{m}^{2} \\ & (\mathrm{~min}) \end{aligned}$ | Test Condition： Se contrast at 100，brightness at 100 ，color at User preset． |
| AC power input | Yes | 90－264 Volts，47－63 Hz． |
| DC power input（with AC power adapter） | No |  |
| DPMS supported（G2420HD） | Yes | Off mode＜1W Sleep Mode＜1W |
| LED indicator for power status showed | Yes | Green／Amber／None |
| OSD for control \＆information supported | Yes |  |
| Multi－language supported for OSD | Yes | 17 languages． |
| Buttons control supported | Yes |  |
| Flywheel control supported | No |  |
| Scaling function supported | Yes |  |

| Auto adjustment function supported | Yes | ＂I－Key＂function |
| :--- | :--- | :--- |
| DDC function supported（EDID ver．1．3） | Yes | DDC2B |
| DDC－Cl support version 1．1 or later | Yes | DDC－Cl |
| Audio speakers supported | No |  |
| Audio Jack（input connector）supported | No |  |
| Earphone Jack（input connector） | Yes | For HDMI Audio only |
| supported | No |  |
| Microphone function supported | Yes | From－5 to＋23 degree |
| Mechanical Tilt base design | Yes |  |
| VESA wall mounting design | No |  |
| Mechanical Rotate design | No |  |
| Mechanical Lift base design | Yes |  |
| Kensington compatible lock design |  |  |

## 3．1．2 Operational Specification

## 3．1．2．1 Power supply

| Item | Condition | Spec | OK | N．A | Remark |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Input Voltage range | Universal input full range | 90～264VAC／47～63Hz | $\checkmark$ |  |  |
| Input Current range | 90～264VAC | $\leq 2.0$ Arms | $\checkmark$ |  |  |
| Power Consumption | Normal＂On＂operation | ＜49 W | $\checkmark$ |  | LED：Green |
| DPMS（G2420HD） | DPMS＂Off＂state DPMS＂Sleep＂state | $\begin{aligned} & <1 W \\ & <1 W \end{aligned}$ | $\checkmark$ |  | $\begin{aligned} & \text { LED: Off } \\ & \text { LED: Amber } \end{aligned}$ |
| Inrush Current | $\begin{aligned} & 110 \text { VAC } \\ & 220 \text { VAC } \end{aligned}$ | $\begin{aligned} & <30 \mathrm{~A} \text { (peak) } \\ & <60 \mathrm{~A} \text { (peak) } \\ & \hline \end{aligned}$ | $\checkmark$ |  | Cold－start |
| Earth Leakage Current | 264 VAC／50Hz | $<3.5 \mathrm{~mA}$ | $\checkmark$ |  |  |
| Hi－Pot | 1．1500VAC， 1 sec 2．Ground test：30A， 1 sec | Without damage ＜ 0.1 ohm | $\checkmark$ |  | （on－line test） （in－lab test） |
| Power Line Transient | IEC1000－4－4 | 1KV | $\checkmark$ |  |  |
|  | IEC1000－4－5（Surge） | Common：2KV， Differential： 1 KV | $\checkmark$ |  |  |
| CCFL operation range | $90 \sim 264 V A C$ | $3 \sim 8 \mathrm{~mA}$ | $\checkmark$ |  | Depends on panel source |
| CCFL Frequency | $90 \sim 264 V A C$ | $40 \mathrm{KHz} \sim 80 \mathrm{KHz}$ | $\checkmark$ |  | Depends on panel source |
| Power cord |  | Color：Black <br> Length： $1500+/-50$ mm | $\checkmark$ |  |  |

3．1．2．2 Signal interface

| Item | Condition | Spec | OK | N．A | Remark |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Signal Cable | 15－pin D－Sub | Color：Black Length： 1500 ＋／－ 30 mm | $\checkmark$ |  |  |
|  | 24－pin DVI－D | Color：Black Length： 2000 ＋／－ 50 mm | $\checkmark$ |  |  |
| Pin assignment | 15－pin D－sub connector | See Note－1 | $\checkmark$ |  | For 15－pin D－sub |
|  | 24-pin DVI-D connector | See Note－2 | $\checkmark$ |  | For 24－pin DVI－D |
|  | 19－pin HDMI connector | See Note－3 | $\checkmark$ |  | For 19－pin HDMI |
| Analog input | Signal type | Separate analog R／G／B | $\checkmark$ |  | For 15－pin D－sub |
|  | Level | 700 mV （peak to peak） | － |  |  |
|  | Impedance | 75 Ohms＋／－1．5 Ohms | $\checkmark$ |  |  |
| Sync input | Signal type | Separate H／V－sync Composite H／V－sync （Positive／Negative） | $\checkmark$ |  | For 15－pin D－sub |
|  | Level | Logic 5.5 V Logic $\mathrm{Low:} 0 \mathrm{~V} \sim 0.4 \mathrm{~V} \sim$ $\sim$ （TTL level） | $\checkmark$ |  | Refer to VESA VSIS Standard V1R1 |
|  | Impedance | $\begin{aligned} & \begin{array}{l} \text { Minimum } 2.2 \mathrm{~K} \Omega \text { (pull } \\ \text { down) } \end{array} \end{aligned}$ | $\checkmark$ |  | $10 \mathrm{~K} \Omega$ for <br> application  |
|  | Sync Pulse Width （SPW） | $\begin{aligned} & 0.7 \mu \mathrm{~s} \text { < H-SPW } \\ & 1 \mathrm{H}<\mathrm{V} \text {-SPW } \\ & \hline \end{aligned}$ | $\checkmark$ |  |  |
| Digital input | Level | 600 mV for each differential line | $\checkmark$ |  |  |
|  | Impedance | 50 Ohm TDR Scan needed for DVI cable and interface board | $\checkmark$ |  |  |

Note－1：The pin assignment of 15 －pin D－sub connector is as below，

| ASignal Assignment | Pin | Signal Assignment |  |
| :--- | :---: | :---: | :--- |
|  |  |  |  |
| 1 | Red video | 9 | PC5V（＋5 volt power） |
| 2 | Green video | 10 | Sync Ground |
| 3 | Blue video | 11 | Ground |
| 4 | Ground | 12 | SDA |
| 5 | Cable Detected | 13 | H－Sync（or H＋V） |
| 6 | Red Ground | 14 | V－sync |
| 7 | Green Ground | 15 | SCL |
| 8 | Blue Ground |  |  |

Note－2：The pin assignment of 24－pin DVI－D connector is as below，
$\square$
回国围国国田

| 月Signal Assignment | Pin | Signal Assignment |  |
| :---: | :---: | :---: | :--- |
| 1 | TMDS RX2－ | 13 | Floating |
| 2 | TMDS RX2＋ | 14 | ＋5V Power |
| 3 | TMDS Ground | 15 | Ground |
| 4 | Floating | 16 | Hot Plug Detect |
| 5 | Floating | 17 | TMDS RX0－ |
| 6 | DDC Clock | 18 | TMDS RX0＋ |
| 7 | DDC Data | 19 | TMDS Ground |
| 8 | Floating | 20 | Floating |
| 9 | TMDS RX1－ | 21 | Floating |
| 10 | TMDS RX1＋ | 22 | TMDS Ground |
| 11 | TMDS Ground | 23 | TMDS Clock＋ |
| 12 | Floating | 24 | TMDS Clock－ |

Note－3：The pin assignment of 19－pin HDMI connector is as below，

Table 4－8 Type A－to－Type A Cable Wire Assignment

| Type A pin | Signal Name | Wire | Type A pin |
| :---: | :---: | :---: | :---: |
| 1 | TMDS Data2＋ | A | 1 |
| 2 | TMDS Data2 Shield | $B$ | 2 |
| 3 | TMDS Data2－ | A | 3 |
| 4 | TMDS Data1＋ | A | 4 |
| 5 | TMDS Data1 Shield | $B$ | 5 |
| 6 | TMDS Data1－ | A | 6 |
| 7 | TMDS Data0＋ | A | 7 |
| 8 | TMDS Data0 Shield | $B$ | 8 |
| 9 | TMDS DataO－ | A | 9 |
| 10 | TMDS Clock＋ | A | 10 |

## 3．2．Customer Acceptance

## 3．2．1．SCOPE

This document establishes the general workmanship standards and functional Acceptance criteria for LCD color monitor model G2420HD Produced by BenQ Corporation．

## 3．2．2．PURPOSE

The purpose of this publication is to define a procedure for inspection of the LCD monitor by means of a customer acceptance test，the method of evaluation of defects and rules for specifying acceptance levels．

## 3．2．3．APPLICATION

The＂Customer Acceptance Criteria＂is applicable to the inspection of the LCD monitor， completely packed and ready for dispatch to customers．Unless otherwise specified，the customer acceptance inspection should be conducted at manufacturer＇s site．

## 3．2．4．DEFINITION

The＂Customer Acceptance Criteria＂is the document defining the process of examining， testing or otherwise comparing the product with a given set of specified technical， esthetic and workmanship requirements leading to an evaluation of the＂degree of fitness for use＂，including possible personal injury or property damage for the user of the product．

## 3．2．5．CLASSIFICATION OF DEFECTS

The defects are grouped into the following classes：
Critical defect
A critical defect is a defect that judgment and experience indicate is likely to result in hazardous or unsafe conditions for individuals using，maintaining or depending upon the product．

## Major defect

A major defect is a defect，other than critical，that is likely to result in failure，or to reduce materially the usability of the product for its intended purpose．

## Minor defect

A minor defect is a defect that is not likely to reduce materially the usability of the product for its intended purpose，or is a departure from established standards having little bearing on the effective use of operation of the product．

## 3．2．6．CLASSIFICATION OF DEFECTIVES

A defective is a product which contains one or more defects．The defective will be classified into following classes．

Critical defective
A critical defective contains one or more critical and may also contain major and／or minor defects．

## Major defective

A major defective contains one or more defects and may also contain minor defects but contains no critical defect．

Minor defective
A minor defective contains one or more minor defects but contains no critical and major defects．

## 3．2．7．EXPRESSION OF DEFECTIVES

Number of defects
Percent of defects $=----------------------------------\quad \times 100 \%$

## 3．2．8．INSPECTION STANDARD

Unless otherwise specified，the inspection standard will be defined by MIL－STD－ 105E（ISO－2859），SINGLE SAMPLING PLAN．level II is in use all the time，inspection levels are normal ，reduce and tighten ．

Acceptance Quality Level
When a critical defect is found，this must be reported immediately upon detection，the lot or batch shall be rejected and further shipments shall be held up pending instructions from the responsible person in relevant organization．

Major Defective：0．4 AQL
Minor Defective：1．50 AQL

## 3．2．9．GENERAL RULES

The inspection must be carried out by trained inspectors having good knowledge of the meaning of＂fitness for use＂．The inspection must be based upon the documents concerning the completely assembled and packed product when more defects appear with the same cause only the most serious defect must be taken into account．Defects found in accessories packed with the product as connecting cables，plugs，adapters and the like，and being inspected as a part of the complete product，must be included in the evaluation．

The evaluation must be within the limits of the product specification and，for not specified characteristics，be related to the design model，limit samples or judgment of a jury of experts．Faults must be demonstrable．

## 3．2．10．TEST CONDITIONS

Unless otherwise prescribed，the test conditions are as follows：
．Nominal mains voltage
Temperature：$+5 \sim+35^{\circ} \mathrm{C}$
Warm up time ： 30 minutes minimum ．
．Visual inspection shall be down with the distance from eyes to the sample $35-50 \mathrm{~cm}$ ．
．Display mode：Primary mode $1920 \times 1080$

## 3．2．11．TEST EQUIPMENTS

1．PC with display adapter or other specific display adapter which is agreed upon by both parties
2．Test program by BenQ
3．Ruler
4．Power saving test tool
5．Minolta color analyzer（ CA－110 or BM－ 7 ）

## 3．2．12．VISUAL INSPECTION CRITERIA

1．PACKING
2．ACCESSORIES
3．APPEARANCE
4．AC POWER AND SIGNAL CABLE
5．INTERIOR OF THE PRODUCT

| No | Description | Class |
| :---: | :---: | :---: |
| 1 | Packing |  |
| 1.1 | Wrong packing material | Major |
| 1.2 | Carton damaged（over 6 cm dia）．wet，badly taped or stapled，product will not arrive in good condition at customer | Minor |
| 1.3 | Carton damaged（ 3 cm to 6 cm dia），badly taped or stapled，product will arrive in good condition at customer | Minor |
| 1.4 | Wrong marking of trade mark | Major |
| 1.5 | Wrong marking of model number | Major |
| 1.6 | Wrong serial \＃marking on carton | Major |
| 1.7 | Product wrongly placed in box（upside down） | Major |
| 1.8 | Broken polyfoam or PU foam | Major |
| 1.9 | Broken packing bag | Major |
| 1.10 | Wrong size or poor printing for artwork／character | Major |
| 1.11 | Bar－code wrong，missing，or damaged | Major |
| 1.12 | Label on box missing or damaged | Major |
| 1.13 | Strange object in the box | Major |
| 1.14 | Unit not corresponding to model stated on external label | Major |
| 1.15 | Superficial breaking 5～10 cm dia | Minor |
| 2 | Accessories |  |
| 2.1 | Missing accessory parts | Major |
| 2.2 | Wrong Accessory parts | Major |
| 3 | Appearance of product |  |
| 3.1 | Incorrect color of cabinet | Major |
| 3.2 | Incorrect color of tilt／swivel base | Major |
| 3.3 | Wrong logo or name plate | Major |

| No | Description | Class |
| :---: | :---: | :---: |
| 3.4 | Poor print of logo or name plate | Major |
| 3.5 | Label on product Wrong or missing | Major |
| 3.6 | Scratched or dirty but legible spec．label | Minor |
| 3.7 | GAP between LCD and front bezel is over 2.0 mm | Major |
| 3.8 | Dot／area discolor over 1 mm dia．in front or over 2 mm dia．in other areas | Major |
| 3.9 | Cabinet warped，sagged or bulging $>0.5 \%$ of surface length | Major |
| 3.10 | Cabinet warped，sagged or bulging noticeable but $<0.5 \%$ of surface length | Minor |
| 3.11 | Sharp stud or edge，which can cause damage not safe | Major |
| 3.12 | Finishing of piece parts will not arrived in good condition at the customer | Major |
| 3.13 | Cabinet step（ between housing and bezel ）$>1.0 \mathrm{~mm},<1.5 \mathrm{~mm}$ | Minor |
| 3.14 | Cabinet step（ between housing and bezel ）$>1.5 \mathrm{~mm}$ | Major |
| 3.15 | Wiring or fixing cord comes out of cabinet or jammed | Major |
| 3.16 | Auxiliary material used during production not removed | Major |
| 3.17 | Cabinet parts come loose during normal handling，not safe | Critical |
| 3.18 | Cabinet parts come loose during normal handling，but safe | Major |
| 3.19 | Tilt／swivel too flexible／not working | Major |
| 3.20 | Tilt／swivel stiff | Minor |
| 3.21 | Dirty front bezel and housing can＇t remove | Major |
| 3.22 | Dirty front bezel and housing removable easily | Minor |
| 3.20 | Sticker or loose user control switch which will not function correctly | Major |
| 3.21 | Missing knob or switch，not safe | Critical |
| 3.23 | Missing knob or switch，but safe | Major |
| 3.24 | Poor functional user controls in mechanical | Major |
| 3.25 | Unreadable printing of user controls label | Major |
| 3.26 | Rubber foot missing | Major |
| 3.27 | LED wrong material or missing | Major |
| 3.28 | LED sagged $>1.0 \mathrm{~mm}$ or bulging $>0.5 \mathrm{~mm}$ | Minor |
| 3.29 | Wrong S／N between spec．label and monitor display | Major |
| 4 | AC power and signal cable |  |
| 4.1 | AC power or connector not correct or damaged，not safe | Critical |
| 4.2 | AC power or connector not correct or damaged，but safe | Major |
| 4.3 | Signal cable contact pin dirty | Minor |
| 4.4 | Signal cable plug dirty or surface damaged，but safe | Minor |
| 4.5 | Cable crack | Major |
| 4.6 | Cable scratch（ wire not exposed ），or dirty | Major |
| 4.7 | AC－DC adapter no function | Minor |
| 4.8 | Signal cable contact pin dirty | Major |
| 5 | Interior of the product |  |
| 5.1 | Use Non－QVL（ Qualify vendor list ）component | Major |
| 5.2 | Wrong parts，broken component，but safe | Major |
| 5.3 | Foreign material |  |
|  | Conductive（Has potential to short circuit） | Major |
|  | Non－conductive（Moveable） | Minor |
| 5.4 | Missing hardware，component or screw，stripped screw | Major |
| 5.5 | Loose hardware／screw or insufficient torque | Major |
| 5.6 | Poor wire routing，which is no concerned on EMI | Minor |
| 5.7 | Cold soldering／loose connections（Electrical） | Major |
| 5.8 | Wires and mechanical structure do not meet UL／CSA or TUV | Critical |
| 5.9 | Wrong parts，broken component，not safe | Critical |
| 5.10 | Component burn | Critical |

## 3．2．13．OPERATIONAL INSPECTION CRITERIA

1．TEST PATTERN
2．SPECIFICATIONS
3．OPERATIONAL INSPECTION CRITERIA

## 3．2．13．1．List of test pattern

3．2．13．2．Video performance

| Item | Spec | OK | N．A | Remark |
| :--- | :--- | :--- | :--- | :--- |
| Max．support Pixel rate | 170 MHz | $\checkmark$ |  | Both for analog and <br> digital inputs |
| Max．Resolution | $1920 \times 1080 @ 60$ | $V$ |  | Both for analog and <br> digital inputs |
| Rise time＋Fall time | $<5.89 \mathrm{~ns}$ <br> $(50 \%$ of minimum pixel <br> clock period） | $V$ |  | $1920 \times 1080 @ 60 \mathrm{~Hz}$ <br> （max．support timing） |
| Settling Time after <br> overshoot／undershoot | $<5 \%$ final full－scale value | $V$ |  | Refer to VESA VSIS <br> Standard V1R1 |
| Overshoot／Undershoot | ＜ $12 \%$ of step function <br> voltage level over the full <br> voltage range | $V$ |  | Refer to VESA VSIS <br> Standard V1R1 |

3．2．14．PANEL INSPECTION CRITERIA

| Inspection Item | Specification |
| :--- | :--- |
| Line defect | Can＇t be seen |
| Bright Dot | $<=2$ dots |
| Green bright <br> dots | $<=2$ dots |
| Dark dots | $<=4$ dots |
| Total dots defect | $<=5$ dots |
| Continuous <br> Defect | Two continuous bright dots（vertical ，horizontal，oblique）：＜＝1 <br> pair <br> Exclude continuous green－green bright dots |
|  | Three or more continuous bright dots（vertical， <br> horizontal ，oblique）：Not allowed |
|  | Two continuous dark dots（vertical ，horizontal，oblique）：＜＝2 <br> pairs |
|  | Three or more continuous dark dots（vertical，horizontal， <br> oblique）：Not allowed |
|  | Distance between 2B dots：＞＝15mm <br> Distance between 2Ddots：＞＝15mm <br> Distance between B and D dot ：＞＝10mm |

## Note：

This Panel Specification is subject to change．Please check it on eSupport system for latest update．

## 4 Level 1 Cosmetic／Appearance I Alignment Service

## 4．1．Software／Firmware Upgrade Process

## 4．1．1 Hardware Requirement：

1．I2C board $x 1$（a．Print Board b．I2C Board）
2．DSUB VGA cables $\times 2$
3．Printer cable（with one male connector and another female connector）$x 1$ ．
4．PC or Notebook with parallel（printer）port x1．

Check the Jumpers on the I2C circuit board（make sure J5／J6／J7／J8 are set at Pin 1 \＆Pin 2 short）

## 4．1．2 Software prepare

## 1．Realtek．exe

RTDToolexe

Step 1：Press RTD Tool
Step 2：Choose＂IIC＂，＂Serial Flash＂and＂0x94＂．Then，press＂ISP＂

Step 3：Click the＂Bank＂and Find the F／W
1．xxx． H 00
2．$x x x . \mathrm{H} 01$
3．xxx．H02
4．xxxEXT．Hex
Step4：Choose＂P－Flash＂and＂Auto＂
Step5：Press to run the program
Step6：Check result，If the words showed in red，need to run the program again

## 4．1．3 EDID Upgrade Procedure

Step 1：Run the program＂Q－EDID－V016．exe＂，when the UI popped up

Note：If＂VGA＂choose 128bytes，and＂HDMI＂choose 256bytes

Step 2：Click＂Open File＂and select＂VGA＂or＂HDMI＂EDID file

Step 3：If load file is successful，it shows＂Open EDID Table OK．＂
And then，Click＂Write EDID＂button to update EDID

Step 4：If write EDID is successful，it shows＂Write EDID OK ．．．＂
And then，click＂Read EDID＂button to check if successful or not．

| $\bigcirc$ EDID Tools V0． 16 |  |  |  |  |  |  |  |  |  |  |  |  |  |  | － |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| F0 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| Write EDID OK．． |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

Step 5：If read EDID is successful，it shows＂Read EDID OK ．．．＂

## 4．2．Alignment procedure（for function adjustment）

## A．Preparation：

1．Setup input timing ICL－605（ 1280x1024＠75Hz ），Pattern：5－Mosaic．
2．Setup unit and keep it warm up at least 30 minutes．

## B．Timing adjustment：

1．Enter factory setting area（press＂ENTER＂，＂MENU＂and then press＂SOFTPOWER＂）．
2．Check the settings to following values：
Contrast $=50$
Brightness $=90$
Color＝User Mode
Senseye mode＝Standard
Language＝English
Burn In＝ON
Then，turn off the monitor power．
3．Turn on power enter user area．
C．Color balance adjustment：
1．Enter factory setting area（press＂ENTER＂，＂MENU＂and then press＂SOFTPOWER＂）．
2．Setup input timings WS7（1280x1024＠75Hz），Pattern：5－Mosaic．
3．Setup Color mode＂User Mode＂．
4．Press＂I－KEY＂（ or Left key directly），and then OSD will show＂White Balance＂item and then press＂ENTER＂button to do auto color．

## D．Color adjustment：

1．Setup input timing ICL－605，white pattern．
2．Confirm auto color adjustment had already done．
3．Measure color temperature by Minolta CA－110（or equivalent equipment）．
4．Check the color temperature Bluish，Reddish \＆Normal．The color temperature specification as follows：

| White Balance | X＋－ | 0．283＋（－） 0.015 |
| :---: | :---: | :---: |
| （Bluish，9300K set on OSD） | Y＋－ | 0．297＋（－） 0.015 |
| White Balance | X＋－ | $0.326+(-) 0.015$ |
| （Reddish，5800K set on OSD） | Y＋－ | $0.342+(-) 0.015$ |
| White Balance | X＋－ | $0.313+(-) 0.015$ |
| （sRGB，6500K set on OSD） | Y＋－ | 0． $329+(-) 0.015$ |

5．Setup input timing， 32 －Gray pattern．
To check if there are any abnormal display problems of preset timing modes
Check the following preset timings with General pattern：

| No． | Mode | H | V |
| :---: | :---: | :---: | :---: |
| 1 | $720 \times 400 @ 70 \mathrm{~Hz}$ | 31.468 | 70.8 |
| 2 | $640 \times 480 @ 60 \mathrm{~Hz}$ | 31.469 | 59.940 |
| 3 | $640 \times 480 @ 75 \mathrm{~Hz}$ | 37.500 | 75.000 |
| 4 | $800 \times 600 @ 60 \mathrm{~Hz}$ | 37.879 | 60.317 |
| 5 | $800 \times 600 @ 75 \mathrm{~Hz}$ | 46.875 | 75.000 |
| 6 | $1024 \times 768$＠ 60 Hz | 48.363 | 60.004 |
| 7 | $1024 \times 768$＠ 75 Hz | 60.023 | 75.029 |
| 8 | $1152 \times 864 @ 75 \mathrm{~Hz}$ | 67.500 | 75.000 |
| 9 | $1280 \times 1024 @$ <br> 60 Hz | 63.981 | 60.020 |
| 10 | $1280 \times 1024 @$ <br> 75 Hz | 79.976 | 75.025 |

6．Checking if the picture is no good，reject this monitor．
7．To check the power consumption by disabling＂burn－in mode＂setting
8．To clear user data and program complete DDC data to monitor by IIC bus communication．

## E．Writing EDID file：

1．Setup a PC with DDC card．
2．Connect $P C$ to monitor with a $D-s u b(D V I)$ signal cable．
3．Please refer to the C212 for the correct EDID file．
4．Runs the writing program to write the EDID file into EEPROM ．
5．Read EEPROM data and confirm it to match with the C212 document definition．

## F．Command definition ：

PC Host will send $0 \times 7 \mathrm{C}$ IIC slave address and then following 4 bytes command

| I2C Send Command | Byte1 | Byte | Byte <br> 3 | Byte4 | OK | N．A． | Remark |
| :--- | :---: | :---: | :---: | :--- | :--- | :--- | :--- |
| Write Contrast to MCU RAM | CA | 55 | Data | cksu | m |  |  |

| Write Cx R－Gain Data to EEPROM | AA | 7C | Data | $\begin{aligned} & \hline \mathrm{cksu} \\ & \mathrm{~m} \end{aligned}$ |  | $\checkmark$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Write Cx G－Gain Data to EEPROM | AA | 7D | Data | $\begin{aligned} & \hline \text { cksu } \\ & \mathrm{m} \\ & \hline \end{aligned}$ |  | $\checkmark$ |  |
| Write Cx B－Gain Data to EEPROM | AA | 7E | Data | $\begin{aligned} & \mathrm{cksu} \\ & \mathrm{~m} \end{aligned}$ |  | $\checkmark$ | model have extra color temperature |
| Write Contrast to EEPROM | AA | 92 | Data | $\begin{array}{\|l} \hline \text { cksu } \\ \mathrm{m} \\ \hline \end{array}$ | $\sqrt{ }$ |  |  |
| Write Brightness to EEPROM | AA | 93 | Data | $\begin{aligned} & \mathrm{cksu} \\ & \mathrm{~m} \\ & \hline \end{aligned}$ | $\checkmark$ |  |  |
| Write C／T index to EEPROM | AA | 94 | 1～4 | $\begin{aligned} & \mathrm{cksu} \\ & \mathrm{~m} \end{aligned}$ | $\checkmark$ |  | $\begin{gathered} \hline 1=\mathrm{C} 1 / 9300 / \mathrm{Bluish}, \\ 2=\mathrm{C} 2 / 6500 / \mathrm{sRGB} /, \\ 3=\mathrm{C} 3 / 5800 / \text { Reddish, } \\ 4=\text { User, } 5=\mathrm{Cx} \\ \hline \end{gathered}$ |
| Write OSD－Hpos to EEPROM | AA | 95 | Data | $\begin{aligned} & \text { cksu } \\ & \mathrm{m} \\ & \hline \end{aligned}$ | $\checkmark$ |  |  |
| Write OSD－Vpos to EEPROM | AA | 96 | Data | $\begin{array}{\|l} \hline \text { cksu } \\ \mathrm{m} \end{array}$ | $\checkmark$ |  |  |

Note A：Byte4（cksum）＝Byte1＋Byte2＋Byte3
Note B：Data＝The value write to MCU or EEPROM
Note C：XX＝don＇t care，any value（＜＝0xFF）．
When PC Host sends 0x7D command to MCU，MCU must return as following（2 bytes）

| Return Code | R－Byte1 | R－Byte2 |
| :--- | :---: | :---: |
| Checksum error code | FC | AA |
| Normal return code | the above Byte3（／data） | FC |
| If normal return code is exact FCh | FC | CF |

## 5．2．Disassembly IAssembly

## 5．2．1 Disassembly SOP

Preparation before disassemble
1．Clean the room for disassemble
2．Identify the area for monitor
3．Check the position that the monitors be placed and the quantity of the monitor；prepare the area for material flow；according to the actual condition plan the disassemble layout
4．Prepare the implement，equipments，material as bellow：
1）Press－fixture
2）working table
3）Screw－driver
4）knife＊1
5）glove
6）cleaning cloth
7）ESD protection

| ite <br> m | Operation |  | Tool | Notes |
| :--- | :--- | :--- | :--- | :--- |
| 1 |  | Disassemble the stand <br> $\rightarrow 2$ screws | Screw－driver |  |
| 2 |  |  |  | disassembly the bezel <br> from the monitor，notice <br> the disassembly order <br> 1．Left（1）parts of bezel <br> 2．Top（2）parts of bezel <br> 3．Bottom（3）parts of <br> bezel <br> 4．Right（4）parts of <br> bezel <br> Don＇t draw the BZL |

| :---: | :---: | :---: | :---: | :---: |
| 7 |  | Disassemble the SHD |  |  |
| 8 |  | Tear off all the tapes sticked on the BKT （including aluminum foils and acetic tapes ） |  |  |

| 9 |  | Tear off the yellow tape on the LVDS FFC ，and pull LVDS FFC out off the panel． |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 10 |  | Disassemble the hexangular screws （ four or two ） |  |  |
| 10 |  | Turn over the BKT ，and disassemble the power board and I／F board ．－－－－ $\rightarrow 7$ screws | Screw－driver |  |
| 11 |  | Pull out the connector |  |  |

## 5．2．2 Assembly SOP

Preparation before assemble
1．Clean the room for work
2．Identify the area for material
3．Prepare the implement，equipments，materials as bellow：
1）Press－fixture
2）working table
3）Screw－driver
4）knife＊1
5）glove
6）cleaning cloth
7）ESD protection

| 4 |  | Lock PCBA screw ．－－ $\rightarrow$ five or six PCBA screw，one earth screw． | Screw driver ： $7 \pm 1 \mathrm{~kg}$ |  |
| :---: | :---: | :---: | :---: | :---: |
| 5 |  | Turn over the bkt，and lock the hexangular screws（ four or two ） | Screw driver： $5 \pm 0.6 \mathrm{~kg}$ |  |
|  |  | Lock one HDMI screw （if it have that） | Screw driver： Side mount： $3 \pm 0.6$ Other： $4 \pm 0.6$ |  |
| 6 |  | Lock SHD on the BKT ，to fixup the P／B |  |  |
| 7 |  | Insert LVDS FFC in the panel |  |  |

| 8 |  | Fetch yellow tape，and stick it on the LVDS FFC |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 9 |  | Use location tool ，location the bkt on panel | location tool： G24101 |  |
| 10 |  | Stick tapes follow standard： <br> One tape stick on angel side ，one on right side ，one on ground side． <br> Stick acetic tapes on left |  |  |
| 11 |  | Insert light wires，and make sure it connect well． |  |  |
|  |  | Use two acetic tapes fix the light wires． |  |  |

| 12 |  | Stick big aluminum foil on the side（like left PIC） |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 13 |  | Fetch bezel ，and put panel into bezel（don＇t touch the LCD screen． |  |  |
| 14 |  | Put $\mathrm{c} / \mathrm{b}$ in the button， and put button in bezel． <br> Tear the tapes on the back of $\mathrm{c} / \mathrm{b}$ wire ， insert c／b connector in I／F ，stick c／b on panel ． |  |  |
| 15 | 3 <br> 2 $\because \because$ | Fetch cover ，cover the monitor ．（ if it have ear phone function ，assay earphone board on cover first，and insert the wire into I／F ） First cover bottom ，then cover two sides，last cover the angel side ． | $\begin{aligned} & \text { Screw driver(if } \\ & \text { it need) } \\ & 3+0.5 \mathrm{KG} \\ & \Phi 1.75 \pm 0.05 \\ & \# 1 \end{aligned}$ |  |

|  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 16 |  | Assay stand ．（follow picture on left ．）put hinge in front cover ，and lock four screws，then cover the back cover，last put the clip in front cover． | $\begin{aligned} & \text { Screw driver : } \\ & 7.5 \pm 0.5 \mathrm{~kg} \end{aligned}$ |  |
| 17 |  | Put stand in monitor， and lock two screws ． | Screw driver ： $9.0 \pm 1.0 \mathrm{~kg}$ |  |
| 18 |  | Fetch base ，and assay base on monitor ． |  |  |

## 5．3．Main－Shielding Position

| 機種名稱 | 測點A尺寸 | 測點B尺寸 | 測點C尺寸 |
| :--- | :--- | :--- | :--- |

| BenQ G2410HD AUO | 78.65 mm | 57.2 mm | 57.2 mm |
| BenQ G2410HD CMO | 72.65 mm | 55.85 mm | 55.85 mm |
| BenQ T2200 | 56.69 mm | 40 mm | 40 mm |
| BenQ G2420HD／G2420HDB | 78.65 mm | 57.2 mm | 57.2 mm |

## 5．4．Packing

## 5．5．Block diagram

The G2420HD is a 24 ＂（1920x1080）Model，LCD type is TN＋Film and Normally White， 16．7M colors（R，G，B 6－bit data＋FRC data）TFT LCD monitor．There are D－SUB，DVI and HDMI interface LCD monitor．It＇s compliant with VESA specification to offer a smart power management and power saving function．It also offers OSD menu for users to control the adjustable items and get some information about this monitor．The best function is to offer users an easy method to do DDC／CI Enable and Auto Adjustment items well done just by pressing hot key，we called it＂DDC／Cl＂and＂Auto＂which can manual controlled items．
G2420HD also offer DDC2／CI function to meet VESA standard．

The G2420HD consists of a LCD module with 4 lamps，a power board including an inverter， a control board，a Interface board．The block diagram is shown as below．
Monitor internal structure

Monitor internal structure

## 5．6．Trouble Shooting Guide

## 5．6．1 No Display or display is unstable on analog，digital or video port：

## 5．6．2 BUTTON Function：

## 5．6．3 OSD Function：

## 5．6．4 Power no work troubleshooting

## 5．6．4．1 DC／DC converter

## 5．6．4．2 AC／DC converter

## 5．6．4．3 Inverter

## 5．7．Circuit Operation Theory

A－1．）Interface board diagram：

## A－2．）Circuit operation theory：

（a）Monitor Diagram：

（b）Circuit operation theory
A basic operation theory for this interface board is to convert analog signals of Red，Green and Blue to digital signals of Red，Green and Blue．The scaling IC has internal A／D converter，internal OSD，built in RSDS transmitter and auto－detect input timing functions． A／D converter is convert analog signal to digital data．OSD is offering adjustable functions to end－user．Detect timing is for detect change mode．RSDS transmitter is used to compress the digital RGB data，the Hsync，Vsync and pixel clock generated by Scaling then output to LCD module．Flash－rom stores source code and MCU（embedded in Scalar）offers H／W DDC2Bi function \＆controls system processing．EEPROM is stored DDC data，OSD common data and user mode data．
（c）IC introduction：
1．）DDC（Display Data Channel）function：We use DDC IC to support DDC2Bi function．DDC data is store in 24C02（EEPROM）．Those data related to LCD monitor specification．PC can read them by＂SDA＂and＂SCL＂serial communication for $I^{2} \mathrm{C}$ communication for DDC2Bi．
2．）Scalar IC：There are A／D，TMDS receiver，Scaling，OSD and LVDS transmitter functions built－in the RTD2482D IC．Scaling IC is revolutionary scaling and color engine，capable of expanding any source resolution to a highly uniform and sharp image or down scaling from $1920 \times 1080$ ，combined with the critically proven integrated 8 bit triple－ADC and patented Rapid－lock digital clock recovery system．It also support detect mode and DPMS control．
3．）MCU embedded in Scalar：Control unit，it controls all the functions of this interface board， just like the OSD display setting，the adjustable items，adjusted data storage，the external IIC communication，support DDC2Bi．．
4．）EEPROM：We use 24 C 16 to store all the adjustable data，user settings and uses two 24C02 to store D－SUB，DVI and HDMI data．

5．）Flash－rom stores source code．
A－2．）Control board introduction
There are 6 keys for user＇s control which includes＂Power＂，＂Menu＂，＂Right／Plus＂，＂Left／Minus＂， ＂Auto＂，and＂Enter＂．The following descriptions are the introduction of these keys．
（1）Power key：to turn／off power of monitor
（2）＂Menu＂key：to enter sub－menus or select items．
（3）＂Right／Plus key：to select previous and to increase adjustment and Brightness／Contrast Popup submenu hotkey
（4）＂Left／Minus＂key：to select next and to decrease adjustment and Senseye Mode Popup submenu hotkey
（5）＂Auto＂key：to perform auto adjustment
（6）LED：It indicates the DPMS status of this LCD monitor；blue light means DPMS on（Normal operating condition）．Amber light means DPMS off（Power Saving）．

## A－3．）Power board diagram：

Fig． 1

## \＃1 EMI Filter

This circuit（fig．2）is designed to inhibit electrical and magnetic interference for meeting FCC， VDE，VCCI standard requirements．

Fig． 2
\＃2 Rectifier and filter
AC Voltage（90－264V）is rectified and filtered by BD601，C605（See Fig 3）and the DC Output voltage is $1.4^{*}(\mathrm{AC}$ input）．（See Fig．3）

Fig． 3

## \＃3 Switching element and Isolation power transformer

When the Q601 turns on，energy is stored in the transformer．During Q601 turn－off period，the stored energy is delivered to the secondary of transformer．C614，R607，C607 and D601 are snubber circuits．R615 is current sense resistor to control output power．（See Fig．4）

Fig． 4
\＃4 Rectifier and filter
D701，D702，C701，C702，C703 are used to produce DC output．（See Fig．5）

Fig． 5

## \＃5 PWM Controller

The TEA1530（A）T can be used in Fixed Frequency converter designs for low voltage， high current applications．At low power（standby）levels，the system operates in cycle skipping mode which minimizes the switching losses during standby．

The proprietary high voltage BCD800 process makes direct start－up possible from the rectified universal mains voltage in an effective and green way．A second low voltage BICMOS IC is used for accurate，high speed protection functions and control．

The TEA1530（A）T enables highly efficient and reliable supplies to be designed easily．

Fig． 6

## \＃6 Feedback circuit

PC123 is a photo－coupler and KA431 is a shunt regulation．They are used to detect the output voltage change and be the primary and secondary isolation．When output voltage changes，the feedback voltage will be compared and duty cycle will be decided to control the correct output voltage．（See Fig．7）

Fig． 7

## \＃7 DC－DC circuit

IC851（PWM IC TL1451）is used to convert V－INVERTER to other voltage needed．

IC851（TL1451）is a 2－way PWM control IC．
C851／R851 determine the frequency of PWM．
Pin $1 \mathrm{IN}+/ 1 \mathrm{IN}$－and $2 \mathrm{IN}+/ 2 \mathrm{IN}$－are the inputs of the error amplifiers． $1 \mathrm{IN}+/ 2 \mathrm{IN}+$ are used as the feedback pins for DC－DC circuit．
1DTC／2DTC are used for determining the threshold states of dead time control．
C854，C855，C857，C858，R855 and R873 are used for gain／phase compensation．

The timing diagram of TL1451 is shown as following：

P－MOSFET Q852 is used for switching of step－down converter．And FD852／FD853 are the flywheel diodes．
R874／R875 determine the feedback to IC851 to set up the output to +5 V or +3.3 V ．

## \＃8 Inverter Circuit Operation Theory

## LCDM Inverter Controller－－－OZ9933

OZ9933 is a high performance，cost－effective CCFL controller designed for driving large－size LCD applications requiring 2 to 6 CCFLs．
The controller converts unregulated DC voltages into a nearly sinusoidal lamp voltage and current waveforms．

The OZ9933 supports full－bridge power conversion topologies while maintaining high－ efficiency operation，current and voltage regulation，over－voltage and over－current protection， high drive capability．

The control logic provides s regulated ignition voltage and appropriate protection features for over－voltage or over－current conditions．
Pin Assignment of OZ9933

| Pin No． | I／O | Names |  |
| :---: | :---: | :---: | :--- |
| 1 | I | VSEN | Description |
| 2 | $\mathrm{I} / \mathrm{O}$ | SSTCMP | Capacitor for Soft－Start and Loop Compensation |
| 3 | $\mathrm{I} / \mathrm{O}$ | CT | Timing Resistor and Capacitor for Operation and Striking Frequency |
| 4 | $\mathrm{I} / \mathrm{O}$ | RT1 | Timing Resistor for Striking Frequency |
| 5 | -- | GNDA | Signal Ground |
| 6 | O | PDR2 | High Side Driver Output 2 |
| 7 | -- | GNDP | Power Ground |
| 8 | O | NDR2 | Low Side Driver Output 2 |
| 9 | O | NDR1 | Low Side Driver Output 1 |
| 10 | O | PDR1 | High Side Driver Output 1 |
| 11 | --- | VDDA | Input Power Pin |
| 12 | I／O | TIMER | Timing Capacitor for Delay Timer |
| 13 | I | PWM | External PWM Dimming Input |
| 14 | I | ISEN | Current Sense Feedback |
| 15 | I | OVPT | Over－Voltage Protection Threshold Voltage |
| 16 | I | ENA | IC Enable／Disable |

I／O＇：I＝input，O＝output，I／O＝input／output

## Full－Bridge Configuration

Fig． 1
Fig．1：Q801，Q802 and T801 form a full－bridge configuration．
The full－bridge switch is configured such that Q801 N－MOS and Q8026 P－MOS are ON while Q801 P－MOS and Q802 N－MOS are OFF in a half－cycle．During the next half cycle，Q801 N－ MOS and Q802 P－MOS are OFF while Q801 P－MOS and Q802 N－MOS are ON．This develops an alternating current through the transformer primary．

The result in T801 primary coil has an AC square waveform．
Certainly，the secondary of T801 will produce high voltage AC sinusoidal waveform．

## Feed－back Circuit

Fig． 2
Fig． 2 shows the feedback circuit consists of a lamp，R816，D805，R827 and C814． With the lamp current through D805，a half sine－waveform voltage signal is produced． We may get the Maximum value through R827／C814．
After OZ9933 gets the feedback voltage signal from PIN14，the duty of the full－bridge driver outputs is decided．

## Appendix 1 －Screw List／Torque

STANDARD SCREW TORQUE SPEC．
