## Electronic Specification

### AMPLIFIER

Rated Output Power ..... 100W×2 + 200W RMS  
 Signal-to-noise ratio ..... ≥67dBA  
 Frequency response ..... 40Hz~20KHz +0.5/-2.0dB  
 Aux Input ..... 1.00V RMS 20k ohm

### DISC

Laser Type ..... Semiconductor  
 Disc Diameter ..... 12cm/8cm  
 Support Disc ..... CD-DA,  
 CD-R,CD-R,CD-RW,MP2,DVD,DVD-RW,DVD+RW  
 Audio DAC ..... 24Bits/96kHz  
 Total Harmonic Distortion ..... <0.1%(1kHz)  
 Frequency Response ..... 40Hz~20kHz  
 Signal to Noise Ratio ..... ≥67dBA

### TUNER

FM Tuning Range ..... 87.5~108MHz  
 Tuning grid ..... 100k/50kHz

### Sensitivity

- Mono, 26db S/N Ratio ..... 5uV  
 - Stereo, 50db SN Ratio ..... 100uV  
 Selectivity ..... >33dB  
 Image Rejection ..... >25dB  
 Total Harmonic Distortion ..... 3%  
 Signal to Noise Ration ..... ≥67dBA

### SPEAKERS

Speaker Impedance ..... 8ohm  
 Speaker Driver, base ..... 6.5"  
 Speaker Driver, tweeter ..... 3"  
 Frequency Response ..... 60Hz~20kHz ±3.0db

### GENERAL INFORMATION

Total Output power ..... 400W RMS  
 AC Power ..... 230V/50Hz  
 Operation Power Consumption ..... 100W  
 Standby Power Consumption ..... <4W  
 Eco Standby Power Consumption ..... <1W  
 Headphone Output ..... NA  
 USB Direct ..... Version 2.0

### Dimensions

- Main unit (w x h x d) ..... 360x190x65mm  
 - Speaker box (w x h x d) ..... 135x330x135mm  
 - Subwoofer(w x h x d) ..... 170x330x340mm

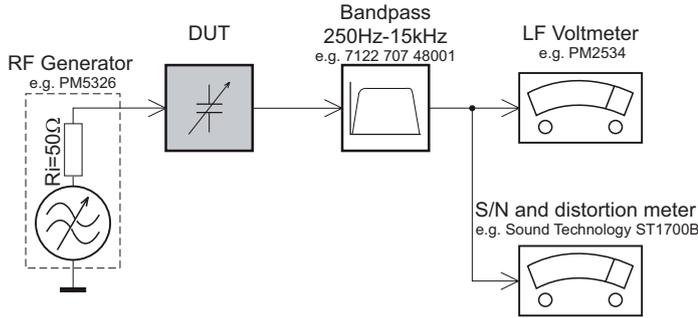

### Weight

- With Packing ..... 13KG  
 - Main unit ..... 1.2KG  
 - Speaker box ..... 2x1.1KG  
 - Subwoofer ..... 5.4KG

Specifications and external appearance are subject to change without notice.

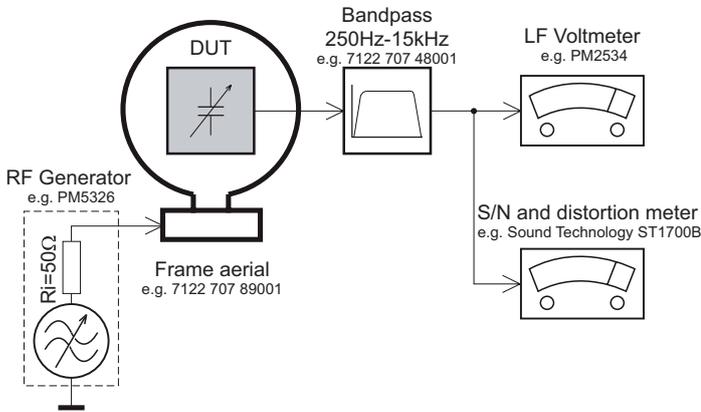

# Measurement Setup

## Tuner FM

Use a bandpass filter to eliminate hum (50Hz, 100Hz) and disturbance from the pilotone (19kHz, 38kHz).

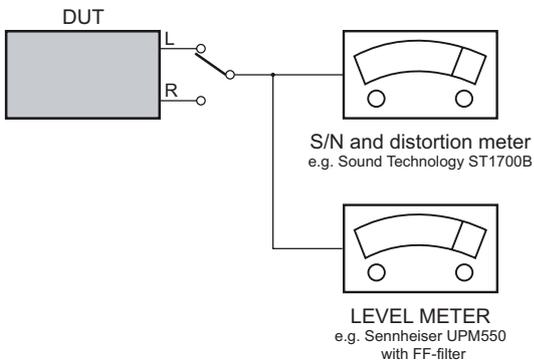

## Tuner AM (MW,LW)

To avoid atmospheric interference all AM-measurements have to be carried out in a Faraday's cage. Use a bandpass filter (or at least a high pass filter with 250Hz) to eliminate hum (50Hz, 100Hz).

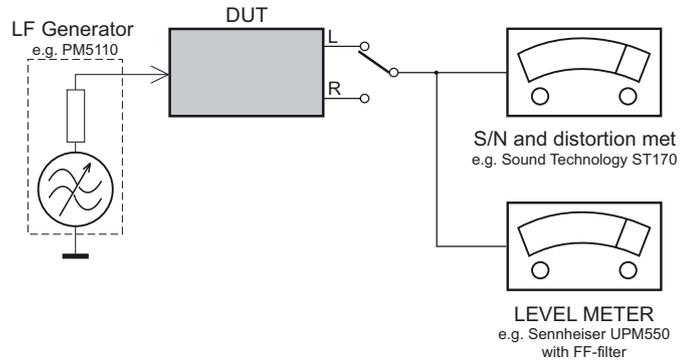

## CD

Use Audio Signal Disc SBC429 4822 397 30184  
(replaces test disc 3)

## Recorder

Use Universal Test Cassette **Cr02** SBC419 4822 397 30069  
or Universal Test Cassette **Fe** SBC420 4822 397 30071

## Service Aids

### **GB** WARNING

All ICs and many other semi-conductors are susceptible to electrostatic discharges (ESD). Careless handling during repair can reduce life drastically.

When repairing, make sure that you are connected with the same potential as the mass of the set via a wrist wrap with resistance.

Keep components and tools also at this potential.

### ESD

### **GB**

Safety regulations require that the set be restored to its original condition and that parts which are identical with those specified, be used

Safety components are marked by the symbol  $\triangle$ .

## INFORMATION ABOUT LEAD-FREE SOLDERING

Philips CE is producing lead-free sets from 1.1.2005 onwards.

### IDENTIFICATION:

Regardless of special logo(not always indicated) one must treat all sets from 1 Jan 2005 onwards, according next rules:

- On our website [www.atyourservice.ce.Philips.com](http://www.atyourservice.ce.Philips.com) you find more information to:
  - \* BGA-de-/soldering (+ baking instructions)
  - \* Heating-profiles of BGAs and other ICs used in Philips-sets
  - \* Lead free

You will find this and more technical information within the "magazine", chapter "workshop news".

For additional questions please contact your local repair-helpdesk.

## SERVICE INSTRUCTION

Safety regulations require that after a repair, the set must be returned in its original condition. Pay in particular attention to the following points:

- Route the wire trees correctly and fix them with the mounted cable clamps.
- Check the insulation of the AC Power lead for external damage.
- Check the strain relief of the AC Power cord for proper function.
- Check the electrical DC resistance between the AC Power Plug and the secondary side (only for sets which have a AC Power isolated power supply):
  1. Unplug the AC Power cord and connect a wire between the two pins of the AC Power plug.
  2. Set the AC Power switch to the "on" position (keep the AC Power cord unplugged!).
  3. Measure the resistance value between the pins of the AC Power plug and the metal shielding of the tuner or the aerial connection on the set. The reading should be larger than 4.5 Mohm (For U.S. it should be between 4.2 Mohm and 12 Mohm).
  4. Switch "off" the set, and remove the wire between the two pins of the AC Power plug.
- Check the cabinet for defects, to avoid touching of any inner parts by the customer.

## Items of Safety Attention

### Maintenance Attention

**Attention:** Please read <Items of Safety Attention> carefully. If there are unexpected conflicts between safety attention and maintenance attention, please abide to safety attention: Safety first.

#### Common Maintenance Attention

- ① Before operating, please unplug the AC power cord from the outlet.
  - a) Disassemble any parts.
  - b) Cut-off or re-connect plug and other inserting parts.
  - c) When electrolysis capacitance and test parts is parallel connected, anti-polarity and wrong replace will cause explosion.
- ② Do not spray chemical on the component system, surroundings and any parts.
- ③ Clean the electric junction with a cotton stick which is with cleaning mixture, except there is other demand in this manual.
 

**Please notes:**

It is a kind of inflammable mixture.

  - ▶ Do not use lubricant to the soldering point, except there is
  - ▶ other demand in this manual

### Common Controlling

During maintenance, please take common controlling to protect component system and electronic parts and prevent damages to the circuit due to improper operation.

Led out wire should be kept away from high-pressure or high-temperature parts.

### ES

Some semi-conductor parts are easily damaged by static charges, these parts are called: ES. They are mainly the cores of transistor lead identification. The following technical ways can be used to reduce the damages by static charges.

Before connecting semi-conductor or the parts. Let off the static charges of the body by connection the earth. In the other hand, to prevent potential electric shock hazard, please use industrial static handle before connecting power for checking the equipment.

- ① After unsoldering the ES parts, put the parts on a electric surface such as aluminum foil to prevent accumulating static charges to damage the parts.
- ② Only use anti-static charges grounded soldering irons to unsolder the parts or solder ES parts.
- ③ Some soldering tin called "Anti-static charges" can also generate charges to damage ES parts.
- ④ Do not use poisonous and caustic agent which these kinds of chemicals can generate static charges to damage the ES parts.
- ⑤ Do not take ES parts out of conductive packages until they are used (mostly replacing ES parts is packed with aluminum foil or similar conductive materials making a short circuit).
- ⑥ After taking replaceable ES parts from Anti-static charges cone, please insert the ES parts in the correctly location soon as possible.
- ⑦ During handing sealed ES parts, reduce the movement of the body (clothes rubbing and moving on the rug can generate static charge to damage the ES parts.)

### Common Soldering Rules

- ① Use only grounded low-voltage soldering iron, and proper size and shape which can sustain the temperature of soldering horn to range from 350 to 390.
- ② Use rosin flux which is demanded by RMA ; include 60%Tin 40% lead.
- ③ To maintain soldering iron and its tin very well.
- ④ Use the wire brush but not spray cleaners such as Freon to clean the soldering surface.
- ⑤ Adopt the melting ways:
  - a) The temperature of soldering horn range from 350 to 390.
  - b) Heat up the parts pin, until soldering tin is molten.
  - c) Use the desoldering pump to suck out the molten soldering tin quickly.

**Note:** Quickly operating can prevent superheating the electronic-plating copper.
- ⑥ Adopt the following soldering ways.
  - a) The temperature of soldering horn range from 350 to 390.
  - b) Hold the soldering iron and welding rod pointed to the parts pin, until soldering tin is molten. Then move the soldering horn quickly to the location that you want to solder.

**Note:** Quickly operating can prevent superheating electronic-plating copper of printed circuit board.

  - c) Check the welting zone carefully, then brush the unwanted soldering tin away with a wire brush.

### Unsolder/Replace IC

#### Notes:

- ① Do not touch the IC body directly with soldering iron.
- ② Pre-heating soldering iron at about 130 for some seconds avoid the damages caused by IC heated suddenly.
- ③ For normal IC, the temperature of the solder horn is about 350, and can increase to 390 for some bigger IC.
- ④ Use the filamentous welding rod and solder which thickness is about 0.3mm to solder thin IC and add the solder as needed.
- ⑤ Replace the IC carefully and solder it quickly.
- ⑥ After unsoldering the IC, clean the basic board carefully to ensure the board is usable.
- ⑦ Prevent the molten soldering tin dripping on the board which will engender a short circuit.
- ⑧ Aim at the first terminal and fix it, then aim at other terminals for correctly inserting IC. You can solder quickly just like this.
- ⑨ Before operating, please make sure the IC is unusable. Do not unsolder repeatedly.
- ⑩ During soldering especially soldering a thin IC with many pins, check the weld carefully.
- ⑪ After replacing, check that there is not soldering leak, rosin joint, short circuit and so on.

#### Unsolder:

- ① Use the soldering iron to melt the soldering tin.
- ② Before unsoldering IC, suck out the molten solder tin.

#### Replace:

- ① Make sure all the IC pins are on their correct location, then solder.
- ② Use a wire brush to clean the welting zone.

## Items of Safety Attention

### Unsolder/replace diode

- ① After unsoldering the unusable diode, nip its body and take it out.
- ② Bend the two pins and the diode is vertical to circuit board.
- ③ Check the polarity of the diode, then place its pins to the correct location.
- ④ Pin the joint and solder it.
- ⑤ Check the weld carefully. If the surface of the weld is not smooth, please solder it again.

### Repair electro-plating copper

- ① Repair the warpage copper as following:
- ② Use a sharp knife to scrape the unusable copper and the unwanted solder off.
- ③ Make one side of the lead bent like a small "U", then put the "U" to IC pins and solder. Another side of the lead is extended until overlap with the well copper then solder. Cut the unwanted lead.

### The flow of repairing DVD part

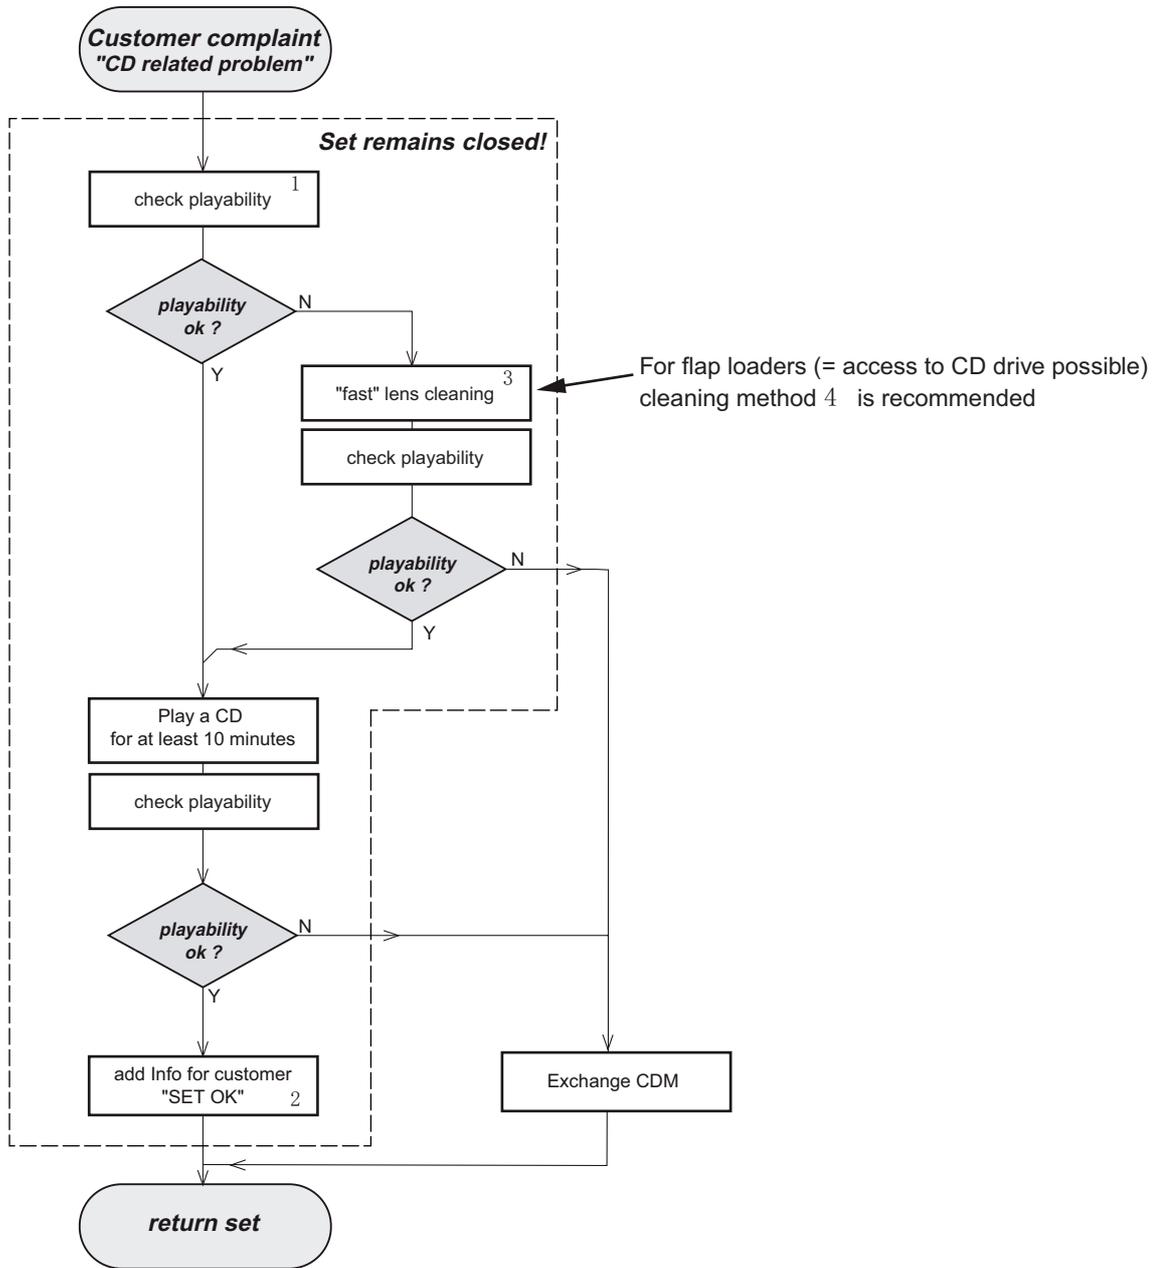

No sound or sound distorted when playing, please check the DVD part.

### Notes for taking down the laser head

Before operating, read these notes as following to prevent the static charges damageing the laser head when reading the laser led.

- ① Lay an electric rug on the working table and the replaced parts are packed in black package.
- ② The electric rug is grounding by put on the electric base. Then put your hand on the electric rug and connect the static handle with the electric rug. Make sure the electric rug and the working table are grounding.
- ③ During the operating, do something such as operating on the electric rug to avoid the static charges touching the laser parts. After that, you can begin to take the laser parts down.
- ④ When replace the laser parts, please do something to make a short circuit and remember to cut the short circuit off after replacing.

Instruction On CD Playability

1 - 4 For description - see following pages

## Instruction On CD Playability

### PLAYABILITY CHECK

For sets which are compatible with **CD-RW** discs  
 use CD-RW Printed Audio Disc .....7104 099 96611  
 TR 3 (Fingerprint)  
 TR 8 (600µ Black dot) **maximum at 01:00**

- playback of these two tracks without audible disturbance  
 playing time for: Fingerprint  $\geq 10$ seconds  
 Black dot from 00:50 to 01:10
- jump forward/backward (search) within a reasonable time

For all other sets  
 use CD-DA SBC 444A .....4822 397 30245  
 TR 14 (600µ Black dot) **maximum at 01:15**  
 TR 19 (Fingerprint)  
 TR 10 (1000µ wedge)

- playback of all these tracks without audible disturbance  
 playing time for: 1000µ wedge  $\geq 10$ seconds  
 Fingerprint  $\geq 10$ seconds  
 Black dot from 01:05 to 01:25
- jump forward/backward (search) within a reasonable time

### CUSTOMER INFORMATION

It is proposed to add an addendum sheet to the set which informs the customer that the set has been checked carefully - but no fault was found. The problem was obviously caused by a scratched, dirty or copy-protected CD. In case problems remain, the customer is requested to contact the workshop directly. The lens cleaning (method 3 ) should be mentioned in the addendum sheet.

The final wording in national language as well as the printing is under responsibility of the Regional Service Organizations.

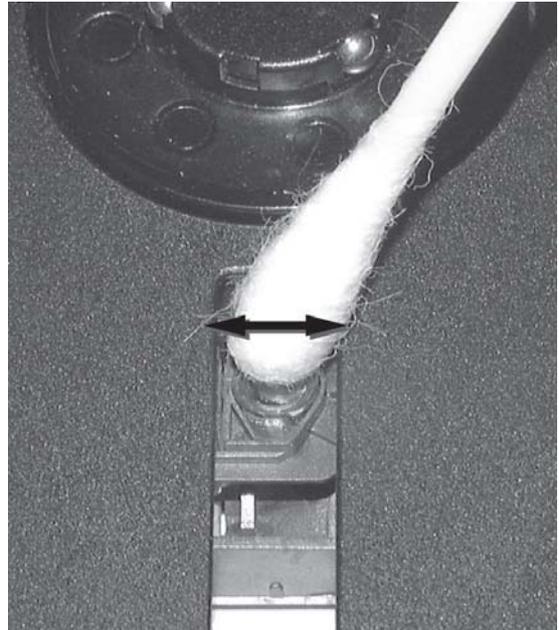

### LIQUID LENS CLEANING

**Before touching the lens it is advised to clean the surface of the lens by blowing clean air over it. This to avoid that little particles make scratches on the lens.**

Because the material of the lens is synthetic and coated with a special anti-reflectivity layer, cleaning must be done with a non-aggressive cleaning fluid. It is advised to use "Cleaning Solvent

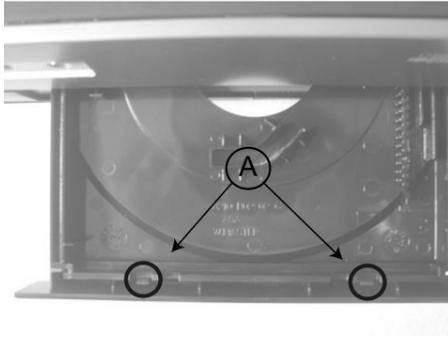

The actuator is a very precise mechanical component and may not be damaged in order to guarantee its full function. Clean the lens gently (don't press too hard) with a soft and clean cotton bud moistened with the special lens cleaner.

The direction of cleaning must be in the way as indicated in the picture below.

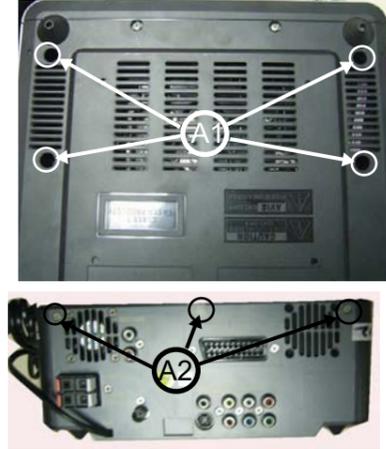

Disassembly Diagram

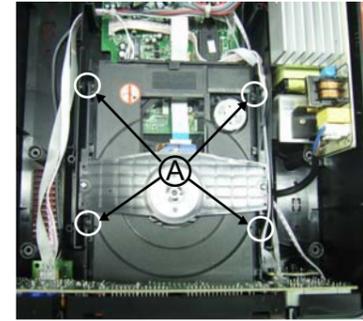

1. Open the DVD Door and loose 2 clips to remove the door

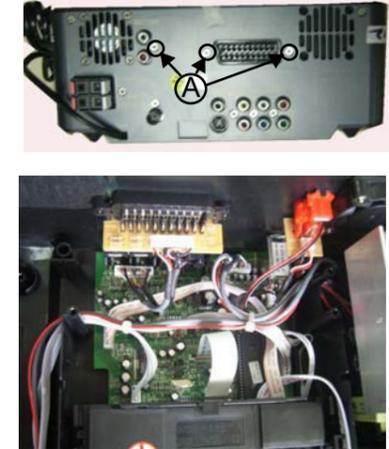

2, Open the Top Cabinet  
A1. Loose 4pcs screws(3x15PA)  
A1. Loose 3pcs screws(3x10FA)

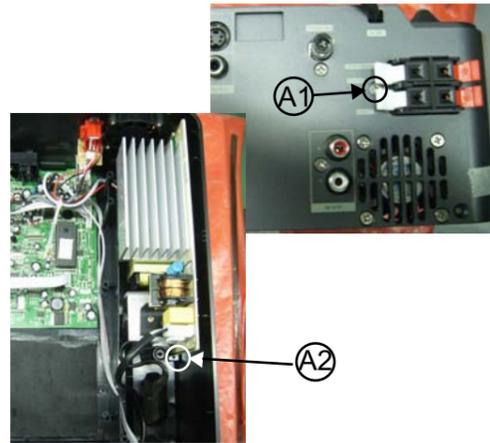

3, Remove the DVD Loader Mechanism  
A. Loose 4pcs screws(3x15BA)

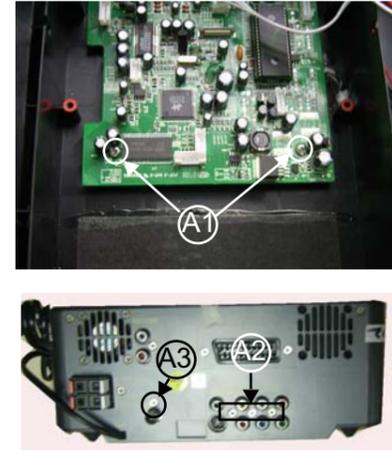

4, Remove the SCART & AUX Board  
A. Loose 3pcs screws(3x12FA)

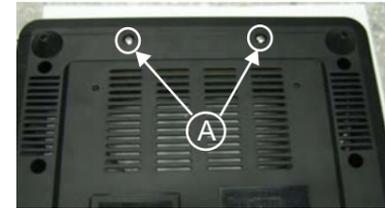

5.Remove the Power Board  
A1. Loose 1pc screw(3x10FA)  
A2. Loose 1pc screw(3x10PA)

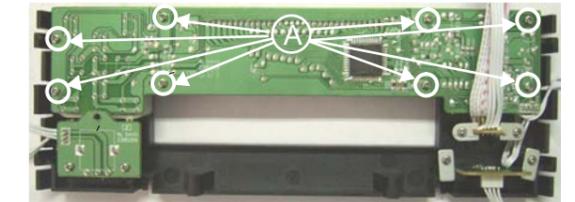

6.Remove the Decoder Board  
A1. Loose 2pcs screws(3x6PT)  
A2. Loose 3pcs screws(3x12FA)  
A3. Loose 1pc screw(3x6FMTT)

7, Remove Front Cabinet  
A. Loose 2pcs screws(3x12BA)

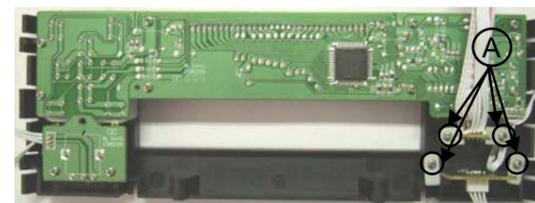

8, Remove the Display Board  
A. Loose 8pcs screws(2.6x8BA)

9, Remove the Volume Board  
A. Loose 3pcs screws(2.6x8BA)

10, Remove the USB & Earphone Board  
A. Loose 4pcs screws(2.6x8PWT)

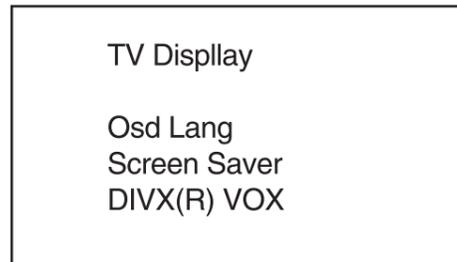

## Software Version Check &amp; Upgrading

## A.MPEG SOFTWARE VERSION CHECK

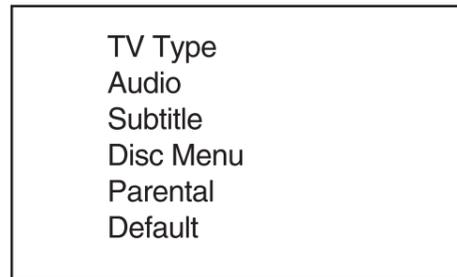

1.Press SYSTEM key (on the remote control) to open setup page,

TV Screen shows:

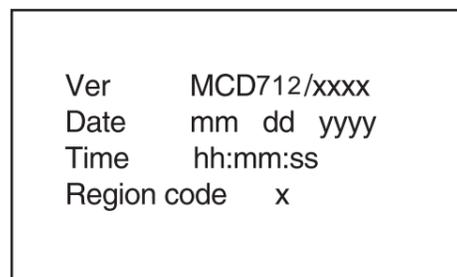

2.Press REMOVAL key (on the remote control) to the original setup page,

TV Screen shows:

3.Enter the password "811502" (on the remote control)

TV Screen shows:

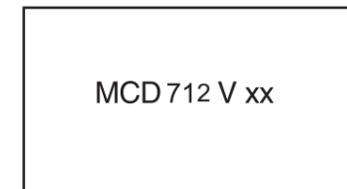

4.Press ▲ or ▼ button (on the remote control) to change region.  
Press OK to confirm.

## B.CPU VERSION CHECK

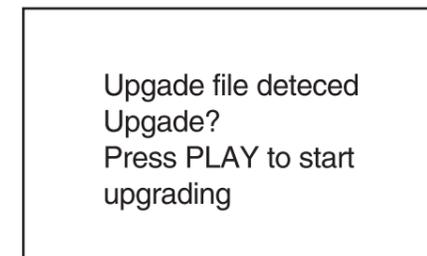

Keep PLAY/PAUSE and STOP buttons (on the set) depressed while pressing POWER on.

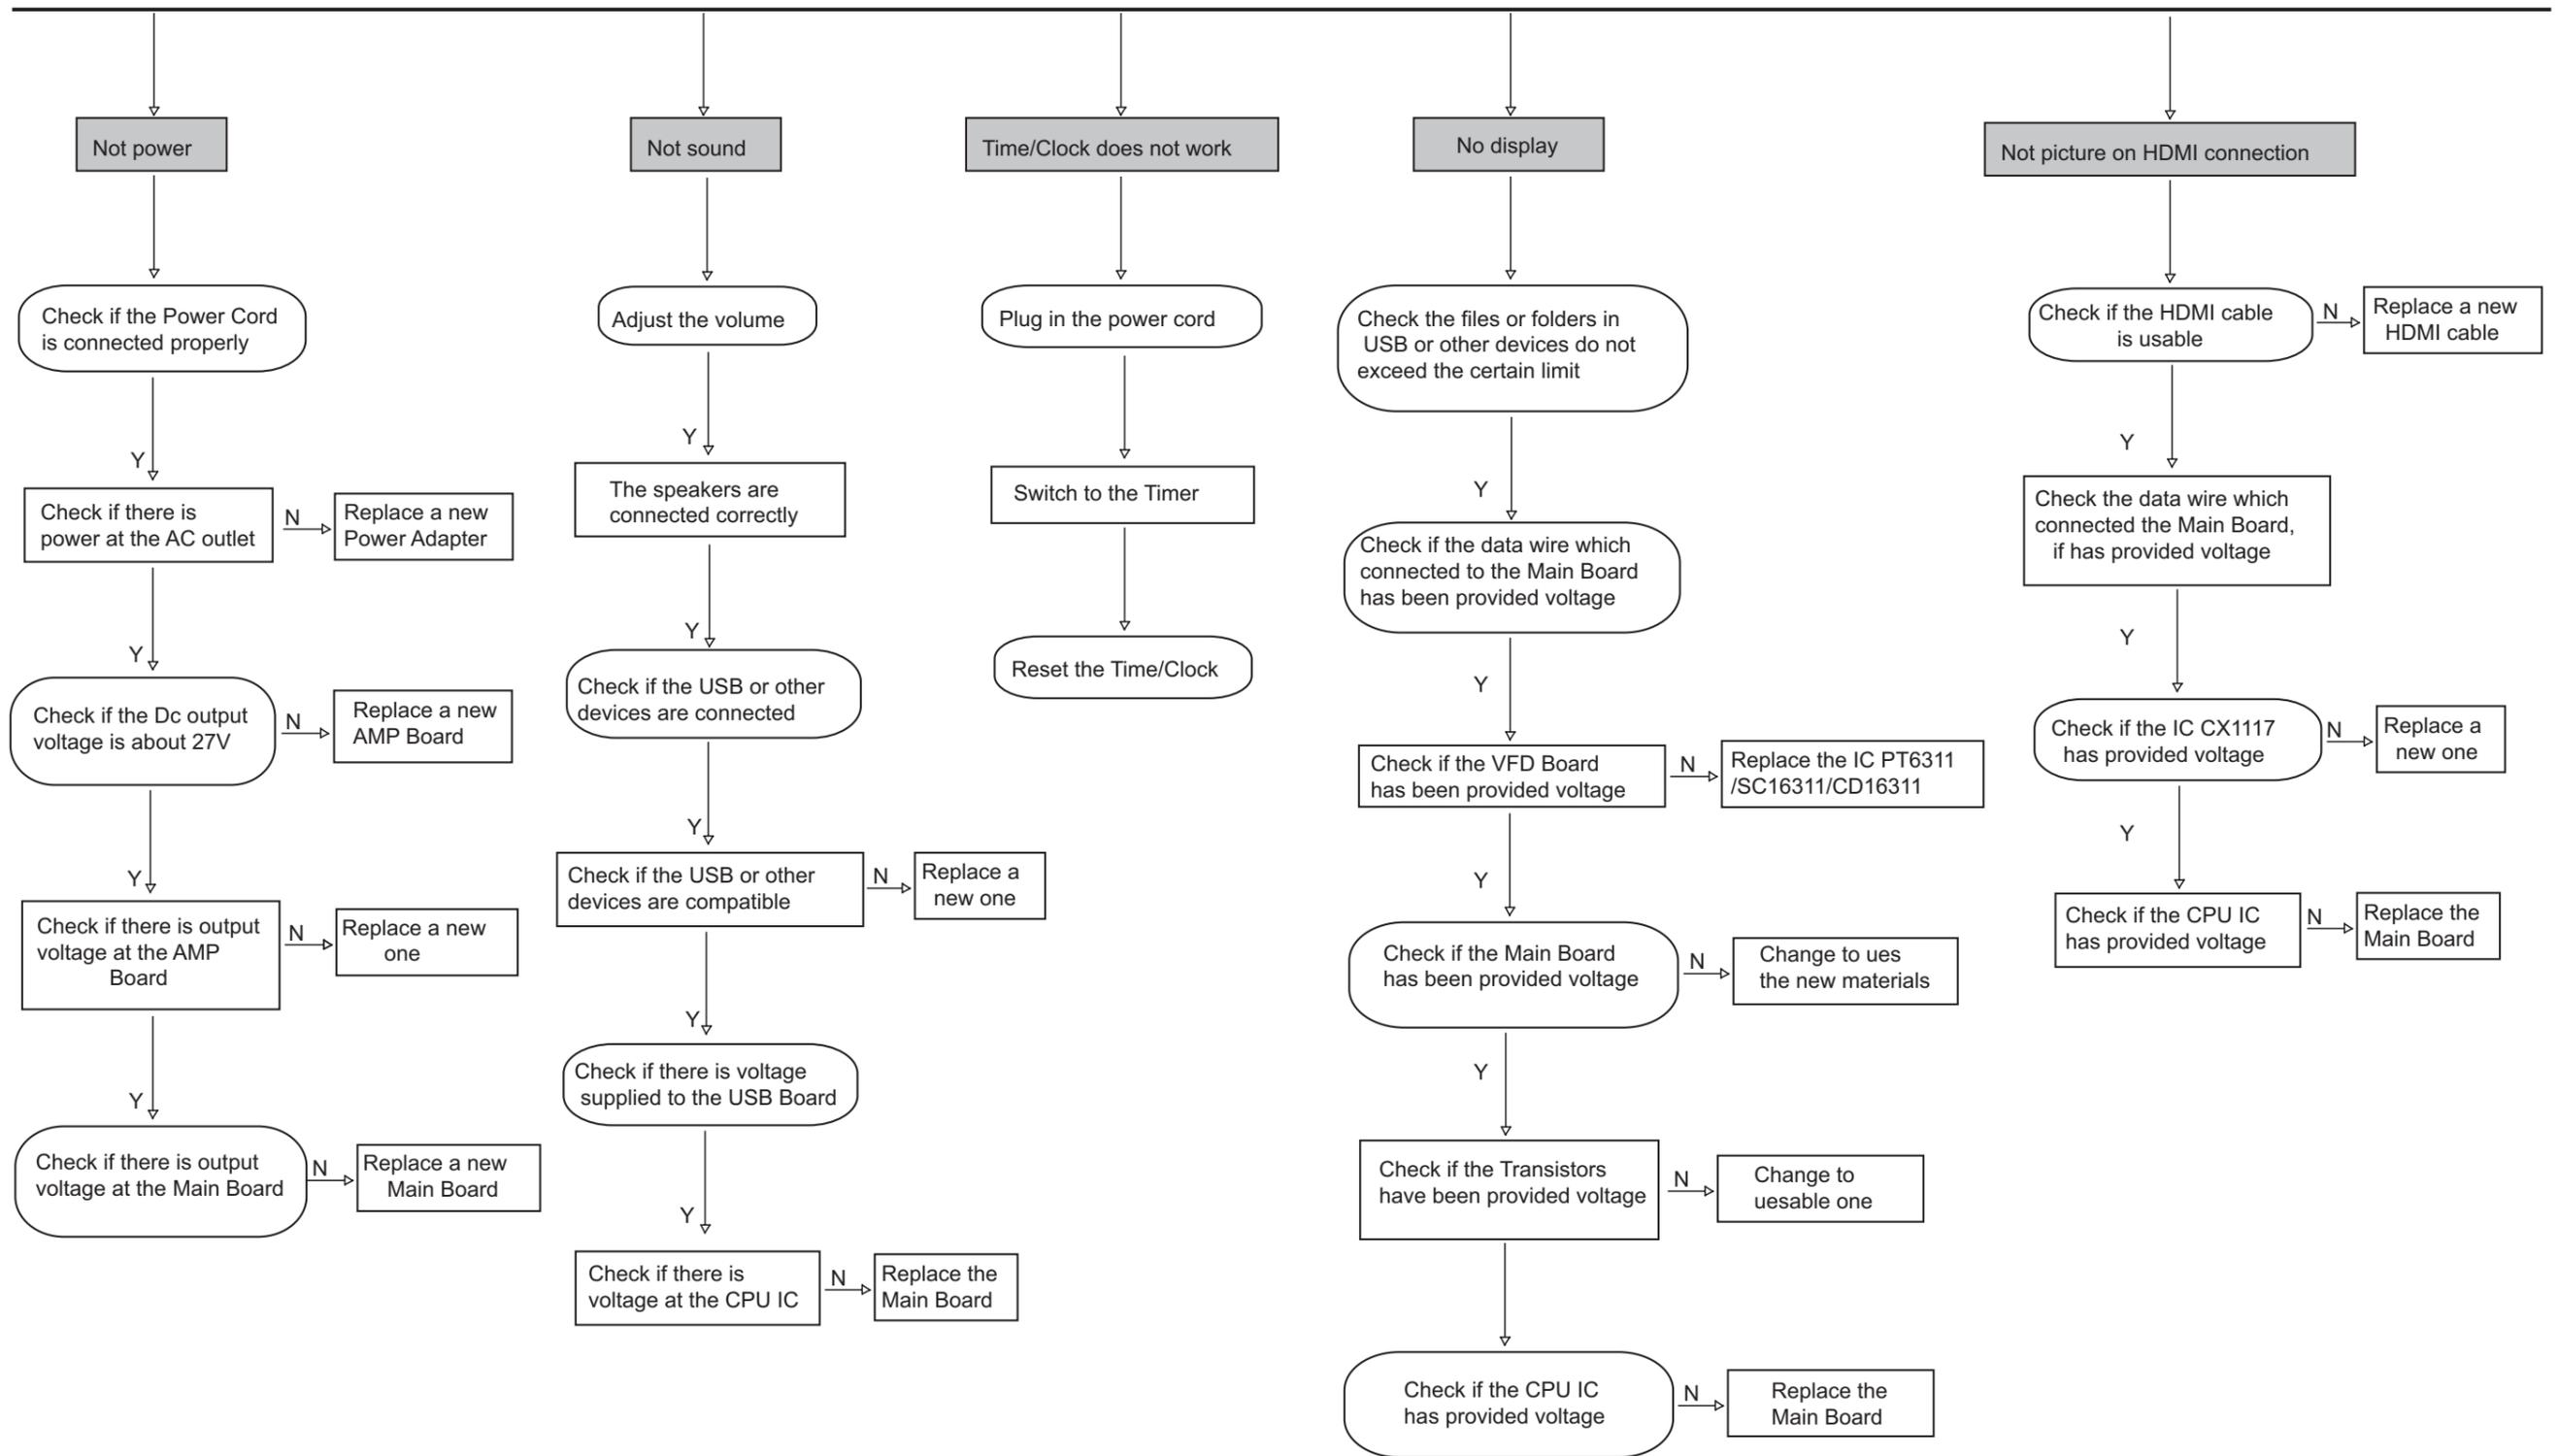

TV screen shows

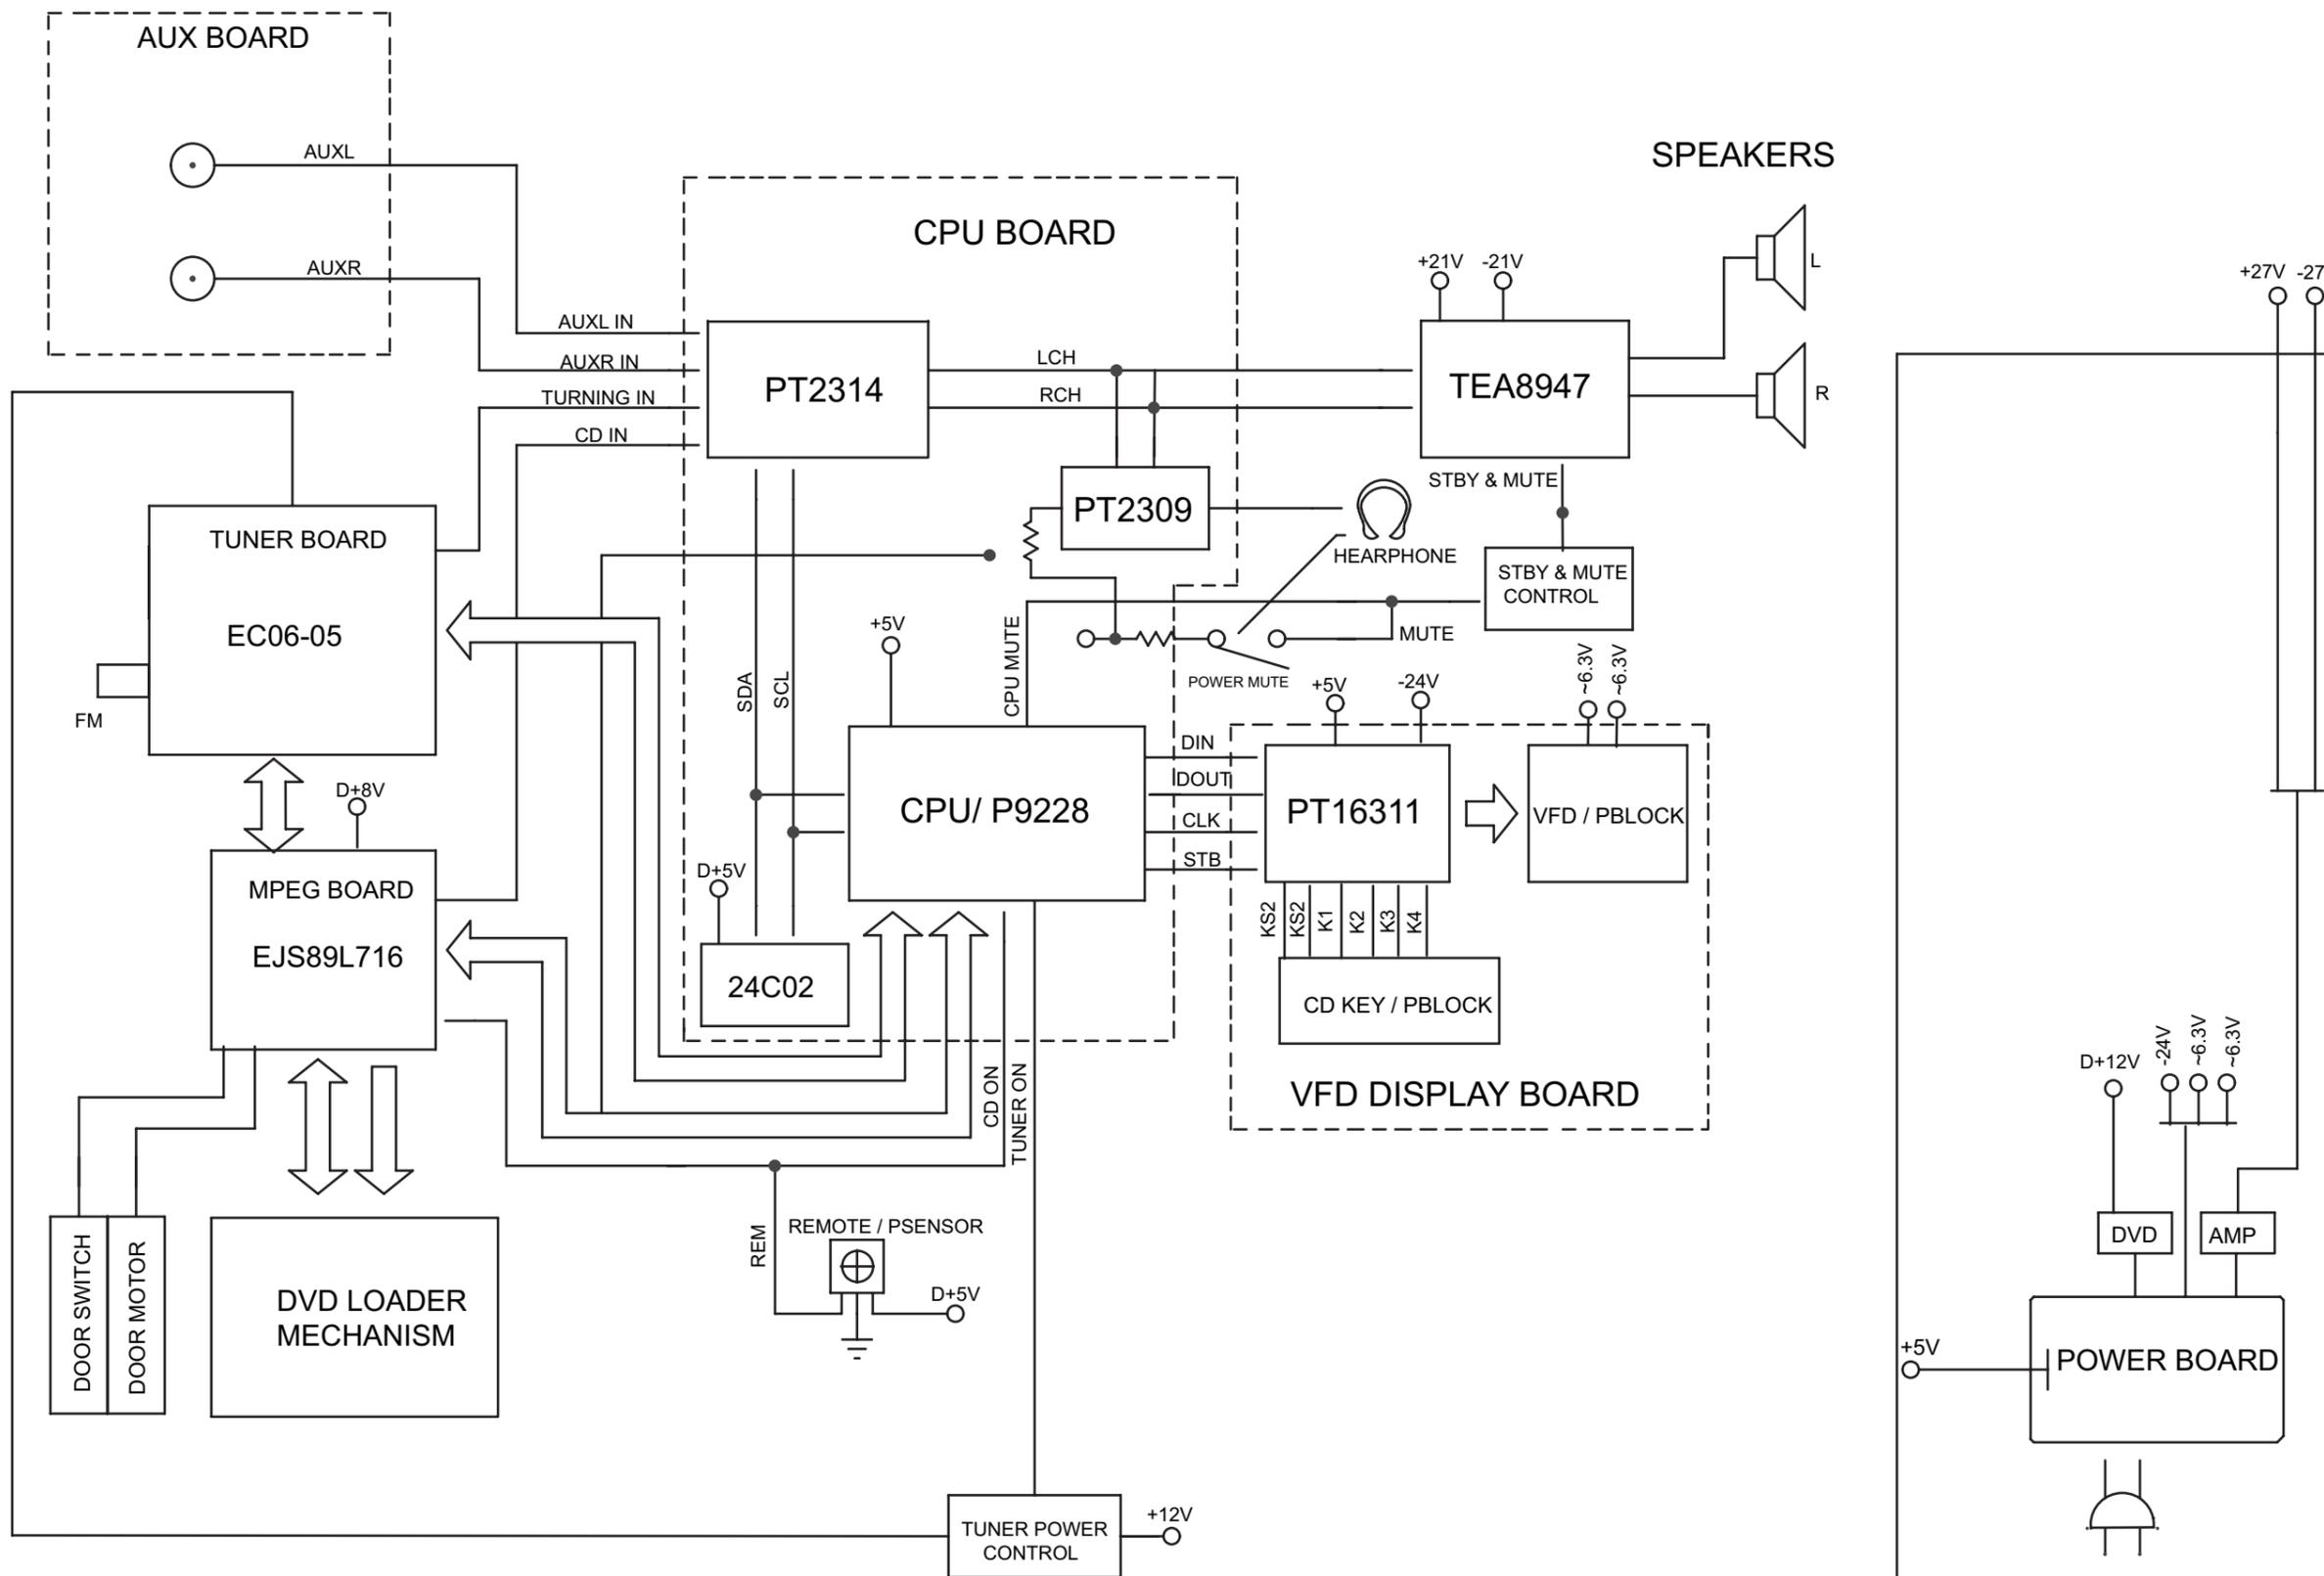

## C. MPEG SOFTWARE UPGRADING

1. download the firmware from Philips support website  
<http://www.philips.com/support>
2. Prepare a uploading CD
3. Put the CD in the CD tray
4. TV Screen shows
