

Low-Saturation 300mA Regulators

Monolithic IC MM159X Series

Outline

This is a 300mA output low-saturation regulator IC with low noise and high ripple rejection ratio. Ceramic capacitors can be used for the output capacitors, and it has an output noise reduction pin and ON/OFF control pin.

Features

- | | |
|-------------------------------------|-----------------------------------|
| 1. High precision output voltage | $\pm 2.0\%$ |
| 2. Output current | 300mA |
| 3. Input/output voltage difference | 0.15V typ. ($I_o=100\text{mA}$) |
| 4. High ripple rejection ratio | 70dB typ. |
| 5. Wide operating temperature range | $-40\sim+85^\circ\text{C}$ |
| 6. Output voltage | 1.5~5.0V (0.1V step) |
| 7. Output capacitor | 1 μF (ceramic) |

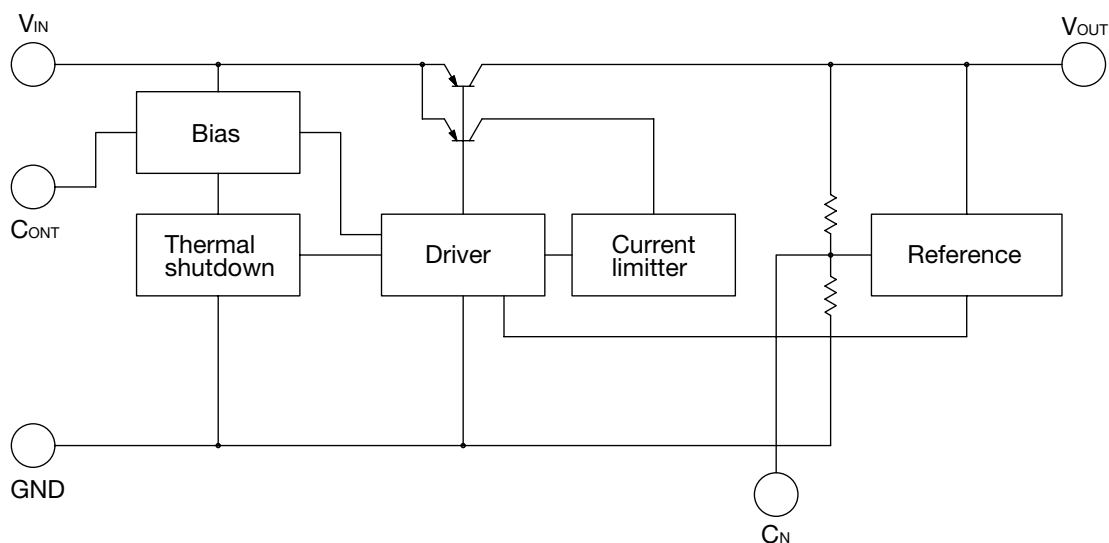

Package

SOP-8D/G

Applications

1. Constant voltage power supply for devices that use batteries
2. Constant voltage power supply for portable communications devices
3. Constant voltage power supply for household electronics products

Measuring Circuit

Application Circuit

*Temperature Characteristics: B Type (X5R Type)

Note

1. The output capacitor is required between output and GND to prevent oscillation.
2. The ESR of capacitor must be defined in ESR stability area.
It is possible to use a ceramic capacitor without ESR resistance for output.
The ceramic capacitor must be used more than 1.0μF and B type (X5R) temperature characteristics.
3. The wire of V_{CC} and GND is required to print full ground plane for noise and stability.
4. The input capacitor must be connected a distance of less than 1cm from input pin.
5. The capacitor is connected to C_N must have low leakage current characteristics, because C_N pin is high impedance. The rise time will change depending on the capacitance value.
6. In case the output voltage is above the input voltage, the overcurrent flow by internal parasitic diode from output to input. In such application, the external bypass diode must be connected between output and input pin.
