

## TWO BANDS DIGITALLY CONTROLLED AUDIO PROCESSOR WITH BASS ALC SURROUND

### 1 FEATURES

- INPUT MULTIPLEXER
  - 4 STEREO INPUTS
  - SELECTABLE INPUT GAIN FOR OPTIMAL ADAPTATION TO DIFFERENT SOURCES
- ONE STEREO OUTPUT
- BASS ALC
- TREBLE AND BASS CONTROL IN 2.0dB
- STEPS
- VOLUME CONTROL IN 1.0dB STEPS
- TWO SPEAKER ATTENUATORS:
  - TWO INDEPENDENT SPEAKER CONTROL IN 1.0dB STEPS FOR BALANCE FACILITY
  - INDEPENDENT MUTE FUNCTION
- ALL FUNCTION ARE PROGRAMMABLE VIA
- SERIAL BUS
- EXTERNALLY ADJUSTABLE SURROUND

### 2 DESCRIPTION

The TDA7468D is a volume tone (bass and treble) balance (Left/Right) processor for quality audio

Figure 1. Package

Table 1. Order Codes

Part Number	Package
TDA7468D	SO28
TDA7468D13TR	Tape & Reel

applications in Hi-Fi systems.

Selectable input gain is provided. Control of all the functions is accomplished by serial bus.

The AC signal setting is obtained by resistor networks and switches combined with operational amplifiers.

Thanks to the used BIPOLAR/CMOS Technology, Low Distortion, Low Noise and DC stepping are obtained

Figure 4. TEST CIRCUIT

### 3 APPLICATION SUGGESTIONS

The first and the last stages are volume control blocks. The control range is 0 to -63dB (mute) with 1dB step resolution for this first one, 0 to 24dB (mute) with 8dB step resolution for the last one.

The very high resolution allows the implementation of systems free from any noisy acoustical effect.

The TDA7468D audioprocessor provides 2 bands tones control.

#### 3.1 Bass, Stages

The Bass cell has an internal resistor  $R_i = 44K\Omega$  typical.

Several filter types can be implemented, connecting external components to the Bass IN and OUT pins.

The fig.5 refers to basic T Type Bandpass Filter starting from the filter component values ( $R_1$  internal and  $R_2, C_1, C_2$  external) the centre frequency  $F_C$ , the gain  $A_V$  at max. boost and the filter Q factor are computed as follows:

$$F_C = \frac{1}{2 \cdot \pi \cdot \sqrt{R_1 \cdot R_2 \cdot C_1 \cdot C_2}}$$

$$A_V = \frac{R_2 C_2 + R_2 C_1 + R_i C_1}{R_2 C_1 + R_2 C_2}$$

$$Q = \frac{\sqrt{R_1 \cdot R_2 \cdot C_1 \cdot C_2}}{R_2 C_1 + R_2 C_2}$$

Viceversa, once  $F_C$ ,  $A_V$ , and  $R_i$  internal value are fixed, the external components values will be:

$$C_1 = \frac{A_V - 1}{2 \cdot \pi \cdot F_C \cdot R_i \cdot Q} \quad C_2 = \frac{Q^2 \cdot C_1}{A_V - 1 - Q^2}$$

$$R_2 = \frac{A_V - 1 - Q^2}{2 \cdot \pi \cdot C_1 \cdot F_C \cdot (A_V - 1) \cdot Q}$$

#### 3.2 Treble Stage

The treble stage is a high pass filter whose time constant is fixed by an internal resistor (25K $\Omega$  typical) and an external capacitor connected between treble pins and ground.

#### 3.3 CREF

The suggested 10 $\mu$ F reference capacitor (CREF) value can be reduced to 4.7 $\mu$ F if the application requires faster power ON.

Figure 5.

## 4 I<sup>2</sup>C BUS INTERFACE

Data transmission from microprocessor to the TDA7468D and vice versa takes place through the 2 wires I<sup>2</sup>C BUS interface, consisting of the two lines SDA and SCL (pull-up resistors to positive supply voltage must be connected).

### 4.1 Data Validity

As shown in fig. 6, the data on the SDA line must be stable during the high period of the clock. The HIGH and LOW state of the data line can only change when the clock signal on the SCL line is LOW.

### 4.2 Start and Stop Conditions

As shown in fig.7 a start condition is a HIGH to LOW transition of the SDA line while SCL is HIGH. The stop condition is a LOW to HIGH transition of the SDA line while SCL is HIGH.

### 4.3 Byte Format

Every byte transferred on the SDA line must contain 8 bits. Each byte must be followed by an acknowledge bit. The MSB is transferred first.

### 4.4 Acknowledge

The master ( $\mu$ P) puts a restive HIGH level on the SDA line during the acknowledge clock pulse (see fig. 4). The peripheral (audio processor) that acknowledges has to pull-down (LOW) the SDA line during this clock pulse. The audio processor which has been addressed has to generate an acknowledge after the reception of each byte, otherwise the SDA line remains at the HIGH level during the ninth clock pulse time. In this case the master transmitter can generate the STOP information in order to abort the transfer.

### 4.5 Transmission without Acknowledge

Avoiding to detect the acknowledge of the audio processor, the  $\mu$ P can use a simpler transmission: simply it waits one clock without checking the slave acknowledging, and sends the new data. This approach of course is less protected from misworking.

Figure 6. Data Validity on the I<sup>2</sup>C BUS

Figure 7. Timing Diagram of I<sup>2</sup>C BUS

Figure 8. Acknowledge on the I<sup>2</sup>C BUS

## 5 SOFTWARE SPECIFICATION

### Interface Protocol

The interface protocol comprises:

- A start condition (S)
- A chip address byte, containing the TDA7468D address
- A subaddress bytes
- A sequence of data (N byte + acknowledge)
- A stop condition (P)

D96AU420

ACK = Acknowledge

S = Start; P = Stop

A = Address

B = Auto Increment

## 6 EXAMPLES

### 6.1 No Incremental Bus

The TDA7468D receives a start condition, the correct chip address, a subaddress with the B = 0 (no incremental bus), N-data (all these data concern the subaddress selected), a stop condition.

D96AU421

### 6.2 Incremental Bus

The TDA7468D receive a start conditions, the correct chip address, a subaddress with the B = 1 (incremental bus): now it is in a loop condition with an autoincrease of the subaddress whereas SUBADDRESS from "XXX1000" to "XXX1111" of DATA are ignored.

The DATA 1 concern the subaddress sent, and the DATA 2 concern the subaddress sent plus one in the loop etc, and at the end it receives the stop condition.

D96AU422

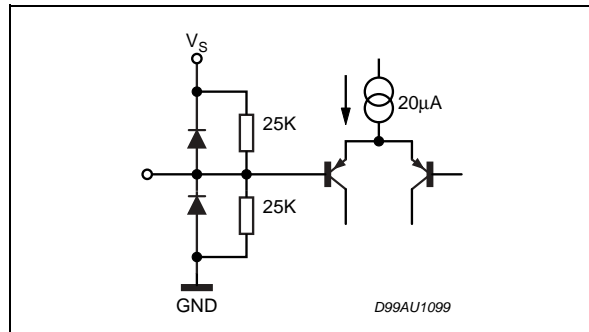

Figure 19. SO20 Mechanical Data & Package Dimensions

DIM.	mm			inch		
	MIN.	TYP.	MAX.	MIN.	TYP.	MAX.
A	2.35		2.65	0.093		0.104
A1	0.10		0.30	0.004		0.012
B	0.33		0.51	0.013		0.200
C	0.23		0.32	0.009		0.013
D (1)	12.60		13.00	0.496		0.512
E	7.40		7.60	0.291		0.299
e		1.27			0.050	
H	10.0		10.65	0.394		0.419
h	0.25		0.75	0.010		0.030
L	0.40		1.27	0.016		0.050
k	0° (min.), 8° (max.)					
ddd			0.10			0.004

(1) "D" dimension does not include mold flash, protusions or gate burrs. Mold flash, protusions or gate burrs shall not exceed 0.15mm per side.
