

U3P/U2P 原

The schematic diagram illustrates the power supply circuit for the U3P/U2P original. It features three identical stages of power transistors (V901, V911, V921) and diodes (VD901, VD911, VD921). The circuit includes a transformer (X904) with primary terminals R, G, B and secondary terminals R, G, B. The transformer is connected to a power source (X902) with pins 1, 2, 3, 4. The circuit also includes a fuse (F901), a capacitor (C901), and a diode (VD902). The output is connected to a power source (X902) with pins 1, 2, 3, 4. The circuit is labeled 'U3P/U2P 原'.
