## **TDA9860**

Universal HiFi audio processor for  
TV

Preliminary specification  
File under Integrated Circuits, IC02

July 1994

# Universal HiFi audio processor for TV

# TDA9860

## FEATURES

- Multi-source selector switches six AF inputs (three stereo sources or six mono sources)
- Each of the input signals can be switched to each of the outputs (crossbar switch)
- Outputs for loudspeaker channel, headphone channel and peri-TV connector (SCART)
- Switchable spatial stereo and pseudo stereo effects
- Audio surround decoder can be added externally
- Two general purpose logic output ports
- I<sup>2</sup>C-bus control of all functions.

## GENERAL DESCRIPTION

The TDA9860 provides control facilities for the main, the headphone and the SCART channel of a TV set. Due to extended switching possibilities, signals from 3 stereo sources can be handled.

## QUICK REFERENCE DATA

SYMBOL	PARAMETER	MIN.	TYP.	MAX.	UNIT

# Universal HiFi audio processor for TV

# TDA9860

## FUNCTIONAL DESCRIPTION

The TDA9860 consists of the following functions:

- source select switching block
- loudspeaker channel with effect controls
- headphone channel
- two port outputs for general purpose
- I<sup>2</sup>C-bus control

### Source select switching block

The TDA9860 selects and switches the input signals from three stereo or six mono sources as there are MAIN, AUX and SCART (Fig.1) to one of the outputs SCART, loudspeaker and headphone (crossbar-switching Table 3). Due to the fact, that the main channel (LINE outputs) is looped outside the circuit (from pins 9 and 24 to pins 10 and 23), signals can be used as LINE output or to insert a 'surround sound decoder'.

### Loudspeaker channel

Volume control is divided into the parts volume 1 and volume 2 / balance. The first part (55 dB) controls left and right channels simultaneously; the second part (23 dB)

controls volume and balance of left and right channels independently. Treble control provides a control range from -12 to +12 dB and bass control from -12 to +15 dB. Extended bass control can be provided by an external T-network (Fig.1) from -15 to +19 dB (2 dB steps).

### Effect controls

'Linear stereo', 'stereo with spatial effect (30% or 52% anti-phase crosstalk)' and 'forced mono with or without pseudo-stereo effect' are controlled by three bits. A muting of 85 dB is provided.

### Headphone channel

The headphone channel is only equipped with volume / balance control. A muting of 85 dB is provided.

### I<sup>2</sup>C-bus control

All settings of control are stored in subaddress registers. Data transmission is simplified by auto-incrementing the subaddresses. The on-chip power on reset sets the mute bit to active, so all 3 stereo outputs are muted. The muting can be switched off by writing a '0' (non-muted) into the mute control bits.

## LIMITING VALUES

In accordance with the Absolute Maximum Rating System (IEC 134).

SYMBOL	PARAMETER	MIN.	MAX.	UNIT
V <sub>P</sub>	supply voltage (pin 6)	0	10	V
V <sub>n</sub>	voltage on all pins, ground excluded	0	V <sub>P</sub>	V
I <sub>o</sub>	output current			
	at pins 15, 18, 13, 20, 7 and 26	-	2.5	mA
	at pins 2 and 31	-	1.5	mA
P <sub>tot</sub>	total power dissipation	-	850	mW
T <sub>stg</sub>	storage temperature	-25	+150	°C
T <sub>amb</sub>	operating ambient temperature	0	+70	°C
V <sub>ESD</sub>	electrostatic handling for all pins (note 1)	-	±300	V
	electrostatic handling for all pins (note 2)	-	±2000	V

### Notes to the Limiting Values

1. Equivalent to discharging a 200 pF capacitor through a 0 Ω series resistor.
2. Equivalent to discharging a 100 pF capacitor through a 1.5 kΩ series resistor.

## THERMAL RESISTANCE

SYMBOL	PARAMETER	THERMAL RESISTANCE
R <sub>th j-a</sub>	from junction to ambient in free air	60 K/W

## Universal HiFi audio processor for TV

TDA9860

**CHARACTERISTICS**

$V_P = 8\text{ V}$ ;  $T_{amb} = +25\text{ °C}$ ; treble and bass in linear positions; balance in mid position; spatial function, pseudo-stereo function and forced-mono function in off position and measurements taken in Fig.1 unless otherwise specified.

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
$V_P$	supply voltage (pin 6)		7.2	8.0	8.8	V
$I_P$	supply current (pin 6)		–	25	–	mA
$V_{ref}$	internal reference voltage		–	$V_P/2$	–	V
$V_4$	voltage (pin 4)		–	$V_P - 0.1$	–	V
<b>DC voltage on pins</b>						
$V_I$	DC input voltage (pins 1, 3, 5, 10, 23, 28, 30 and 32)		–	$V_P/2$	–	V
$V_O$	DC output voltage (pins 7, 9, 13, 15, 18, 20, 24 and 26)		–	$V_P/2$	–	V
$V_C$	DC voltage on capacitors (pins 11, 12, 14, 19, 21, 22, 27 and 29)		–	$V_P/2$	–	V
<b>Audio select switch. Line, SCART and headphone outputs (controlled via I<sup>2</sup>C-bus, Table 3)</b>						
$V_i$	maximum AF input signal on pins 1, 3, 5, 28, 30, 32 (RMS value)	THD $\leq 0.5\%$ on output pins	2	–	–	V
$R_i$	input resistance (pins 1, 3, 5, 28, 30, 32)		20	30	40	k $\Omega$
f	frequency response for all AF outputs	–0.5 dB	20	–	20000	Hz
$V_o$	maximum AF output signal on pins 7, 9, 24, 26 (RMS value)	THD $\leq 0.5\%$	2	–	–	V
$R_L$	allowed external load resistance					
	on output (pins 9 and 24)		10	–	–	k $\Omega$
	on output (pins 7 and 26)		5	–	–	k $\Omega$
$G_v$	gain for all signal arms		–	0	–	dB
$\alpha_{cr}$	switch crosstalk on outputs between AF inputs at f = 10 kHz	unused inputs connected to ground	–	90	–	dB
<b>LOUDSPEAKER CHANNEL (controlled via I<sup>2</sup>C-bus, Table 3)</b>						
<b>Volume control 1 (LEFT and RIGHT simultaneously) f = 1 kHz, 55 steps</b>						
$V_i$	maximum input signal (RMS value; pins 10 and 23)	$G_v = 0$ ; THD $\leq 0.5\%$ on output pins 15 and 18	2	–	–	V
$R_i$	input resistance (pins 10 and 23)		7.5	10	–	k $\Omega$
$G_v$	nominal volume control		–40	–	+15	dB
	minimum volume control		–38	–	+14	dB
$\Delta G_v$	step width	$G_v = -32$ to +15 dB	0.5	1.0	1.5	dB
		$G_v = -40$ to –33 dB	0.25	1.0	1.75	dB
	gain set error	$G_v = -32$ to +15 dB	–	–	1	dB
		$G_v = -40$ to –33 dB	–	–	2	dB

**I<sup>2</sup>C-BUS FORMAT**

S	SLAVE ADDRESS	A	SUBADDRESS	A	DATA	P
---	---------------	---	------------	---	------	---

S	= start condition
SLAVE ADDRESS	= 1000 0000 ( $V_{25}$ = LOW) or 1000 0010 ( $V_{25}$ = HIGH)
A	= acknowledge, generated by the slave or by the master
SUBADDRESS	= subaddress byte, see Table 1
DATA	= data byte, see Table 1
P	= stop condition

This circuit only operates as a slave transmitter.

If more than 1 byte of DATA is transmitted, then auto-increment of the subaddress is performed.

**Byte organisation****Table 1** I<sup>2</sup>C-bus transmission.

# Universal HiFi audio processor for TV

# TDA9860

## SOLDERING

### Introduction

There is no soldering method that is ideal for all IC packages. Wave soldering is often preferred when through-hole and surface mounted components are mixed on one printed-circuit board. However, wave soldering is not always suitable for surface mounted ICs, or for printed-circuits with high population densities. In these situations reflow soldering is often used.

This text gives a very brief insight to a complex technology. A more in-depth account of soldering ICs can be found in our "IC Package Databook" (order code 9398 652 90011).

### Soldering by dipping or by wave

The maximum permissible temperature of the solder is 260 °C; solder at this temperature must not be in contact

with the joint for more than 5 seconds. The total contact time of successive solder waves must not exceed 5 seconds.

The device may be mounted up to the seating plane, but the temperature of the plastic body must not exceed the specified maximum storage temperature ( $T_{stg\ max}$ ). If the printed-circuit board has been pre-heated, forced cooling may be necessary immediately after soldering to keep the temperature within the permissible limit.

### Repairing soldered joints

Apply a low voltage soldering iron (less than 24 V) to the lead(s) of the package, below the seating plane or not more than 2 mm above it. If the temperature of the soldering iron bit is less than 300 °C it may remain in contact for up to 10 seconds. If the bit temperature is between 300 and 400 °C, contact may be up to 5 seconds.

## DEFINITIONS

<b>Data sheet status</b>	
Objective specification	This data sheet contains target or goal specifications for product development.
Preliminary specification	This data sheet contains preliminary data; supplementary data may be published later.
Product specification	This data sheet contains final product specifications.
<b>Limiting values</b>	
Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.	
<b>Application information</b>	
Where application information is given, it is advisory and does not form part of the specification.	

## LIFE SUPPORT APPLICATIONS

These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips for any damages resulting from such improper use or sale.

## PURCHASE OF PHILIPS I<sup>2</sup>C COMPONENTS

Purchase of Philips I<sup>2</sup>C components conveys a license under the Philips' I<sup>2</sup>C patent to use the components in the I<sup>2</sup>C system provided the system conforms to the I<sup>2</sup>C specification defined by Philips. This specification can be ordered using the code 9398 393 40011.
