
SERVICE MANUAL

CHASSIS : Mitsubishi

DOCUMENT : SM-20PM

DATE : 08/08/2005

This manual is the latest at the time of print, and does not include the modification which may be made after the printing, by the constant improvement of product.

CONTENTS

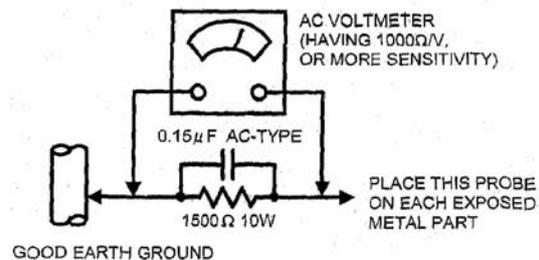

1. Safety precautions.....	1
2. Service adjustment.....	2
3. Purity / convergence adjustment.....	8
4. List of Parts	10
5. Circuit Diagram.....	Attached

1. SAFETY

1. The design of this product contains special hardware, many circuits and components especially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Service should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the products should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the parts list of Service manual. Electrical components having such features are identified by shading on the schematics and by (!) on the parts list in Service manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement part shown in the parts list of Service manual may cause shock, fire, or other hazards
4. **Don't short between the LIVE side ground and ISOLATED (NEUTRAL) side ground or EARTH side ground when repairing.** Some model's power circuit is partly different in the GND. The difference of the GND is shown by the LIVE: () side GND, ISOLATED (NEUTRAL): () side GND and EARTH: () side GND. Don't short between the LIVE side GND and ISOLATED (NEUTRAL) side GND or EARTH side GND and never measure with a measuring apparatus (oscilloscope etc.) the LIVE side GND and ISOLATED (NEUTRAL) side GND or EARTH side GND at the same time. If above note will not be kept, a fuse or any parts will be broken.
5. If any repair has been made to the chassis, it is recommended that the B1 setting should be checked or adjusted (See ADJUSTMENT OF B1 POWER SUPPLY).
6. The high voltage applied to the picture tube must conform to that specified in Service manual. Excessive high voltage can cause an increase in X-Ray emission, arcing and possible component damage, therefore operation under excessive high voltage conditions should be kept to a minimum, or should be prevented. If severe arcing occurs, remove the AC power immediately and determine the cause by visual inspection (incorrect installation, cracked or melted high voltage harness, poor soldering, etc.). To maintain the proper minimum level of soft X-Ray emission, components in the high voltage circuitry including the picture tube must be the exact replacements or alternatives approved by the manufacturer of the complete product.
7. Do not check high voltage by drawing an arc. Use a high voltage meter or a high voltage probe with a VTVM. Discharge the picture tube before attempting meter connection, by connecting a clip lead to the ground frame and connecting the other end of the lead through a 10k Ω 2W resistor to the anode button.
8. When service is required, observe the original lead dress. Extra precaution should be given to assure correct lead dress in the high voltage circuit area. Where a short circuit has occurred,

PRECAUTIONS

- those components that indicate evidence of overheating should be replaced. Always use the manufacturer's replacement components.
9. Isolation Check
(Safety for Electrical Shock Hazard)
After re-assembling the product, always perform an isolation check on the exposed metal parts of the cabinet (antenna terminals, video/audio input and output terminals, Control knobs, metal cabinet, screw heads, earphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.
 10. The surface of the TV screen is coated with a thin film which can easily be damaged. Be very careful with it when handle the TV. Should the TV screen become soiled, wipe it with a soft dry cloth. Never rub it forcefully. Never use any cleaner or detergent on it.
 - (1) Dielectric Strength Test
The isolation between the AC primary circuit and all metal parts exposed to the user, particularly any exposed metal part having a return path to the chassis should withstand a voltage of 3000V AC (r.m.s.) for a period of one second.
(...Withstand a voltage of 1100V AC (r.m.s.) to an appliance rated up to 120V, and 3000V AC (r.m.s.) to an appliance rated 200V or more, for a period of one second.)
This method of test requires test equipment not generally found in the service trade.
 - (2) Leakage Current Check
Plug the AC line cord directly into the AC outlet (do not use line isolation transformers during this check). Using a "Leakage Current Tester", measure the leakage current from each exposed metal part of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground (water pipe, etc.). Any leakage current must not exceed 0.5mA AC (r.m.s.).
However, in tropical area, this must not exceed 0.2mA AC (r.m.s.).
●Alternate Check Method
Plug the AC line cord directly into the AC outlet (do not use a line isolation transformer during this check.). Use an AC voltmeter having 1000 ohms per volt or more sensitivity in the following manner. Connect a 1500 Ω 10W resistor paralleled by a 0.15 μ F AC-type capacitor between an exposed metal part and a known good earth ground (water pipe, etc.). Measure the AC voltage across the resistor with the AC voltmeter. Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75V AC (r.m.s.). This corresponds to 0.5mA AC (r.m.s.).
However, in tropical area, this must not exceed 0.3V AC (r.m.s.).
This corresponds to 0.2mA AC (r.m.s.)

一、Enter Factory Menu

- 1) Entrance of factory controller: Use factory key to enter/switch/exit factory mode. Entrance of common controller: When main menu appears, enter code 6483, which is equivalent to factory key.
- 2) Specification: Factory mode includes three kinds: FACTORY: for factory aging; B/W BALANCE: for adjustment of black and white balance; ADJUST: for all adjustments of factory.

Pressing factory key (or pressing 6483 when main menu appears) will display the following:

Common state → FACTORY → B/W BALANCE → ADJUST

二、Factory Explanation

- 1、 **FACTORY** (Aging mode): This mode is used for factory aging, in which TV set will not be turned off if there is no signal.
- 2、 **Adjustment of B/W BALANCE**: Press factory key to enter into B/W BALANCE and set value as table 1; press "MUTE" key to enter horizontal line, and then adjust grid potentiometer to make the horizontal line to bright up; adjust CUT R, CUT G AND CUT B (See table 2) to make the line turn white; and then adjust grid potentiometer to make the line disappear. Press "MUTE" key to exit the line and dark balance is OK. Fine tuning DRI R and DRI B to make the white to become pure white; and B/W BALANCE is OK.

Table 1

OSD Indication	Explanation	14"-21"	25"-34"
DRI R	Adjust range of output R (0~127)	60	60
DRI B	Adjust range of output B (0~127)	63	63
CUT R	Adjust base level of output R (0~255)	100	100
CUT G	Adjust base level of output G (0~255)	100	100
CUT B	Adjust base level of output B (0~255)	100	100
BRI	Adjust brightness of horizontal line (0~255)	108	120
SIG	8 second built-in signal		

Table 2

Key Name	1	2	3	
Function	CUT R+	CUT G+	CUT B+	
Key Name	4	5	6	
Function	CUT R-	CUT G-	CUT B-	

Note: BRI is only for adjusting voltage of grid, not for SUB-brightness; so please set BRI value as the above table. It is better not to make any changes. If it needs to make change, please make it within the range 14"-21": 100-120; 25"-34": 110-130.

3、ADJUSTMENT

Explanation of adjustments and settings: There are 11 pages for adjustments and settings from “SERVCJ0” to “SERVCJ9” and “AUTO VCJ”. It is available to turn down the page with MUTE key and swiftly arrive the set page with 0-9 keys. Use P+/P- to select the adjusted item; and use VOL+ or VOL- to make set adjustment.

0) Page SERVCJ0

No.	Name	Explanation	
0	H PH	Line center (range: 0~31)	
1	V SH	Vertical center (range: 0-7)	
2	V SI	Vertical range (range: 0-63)	
3	V SC	Vertical correction SC (range: 0-63) (effective only when choosing M61264)	
4	V LI	Vertical linearity (range: 0-63) (effective only when choosing M61264)	
5	N H PH	Deviation amount of line center in NTSC (range: -31~+31)	
6	N V SH	Deviation amount of vertical center in NTSC (range: -7~+7)	
7	N V SI	Deviation amount of line center in NTSC (range: -63~+63)	
8	N V SC	Deviation amount of vertical correction SC in NTCS (range: -63~+63) (effective only when choosing M61264)	
9	N V LI	Deviation amount of vertical linearity in NTCS (range: -63~+63) (effective only when choosing M61264)	

1) SERVCJ1

No.	Name	Explanation	
			30
0	AGC	RF.AGC adjustment (range: 0~127)	1
1	H T	Half-transparent switch (0: off; 1: on)	
2	AUDIO	Audio output (range: 0~127); effective only when the value of PWM OPT of SERVCJ4 is more than 0.	100
3	YDL	Time delay adjustment of brightness (0~7)	2
4	VDL	V delay adjustment L (0~3) (effective only in YUV mode)	0
5	UDL	U delay adjustment (0~3) (effective only in YUV mode)	0
6	YUV TINT	YUV tincture adjustment (0~127) (effective only in YUV mode)	50

2) Page SERVCJ2 (effective only in M61260)

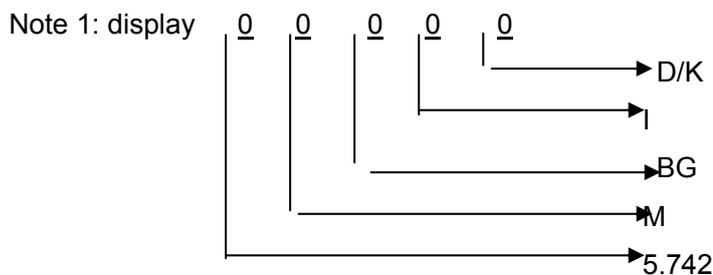

No.	Name	Explanation	
0	S BL R	Adjustment of SECAM R-Y signal (0~31)	16
1	S BL B	Adjustment of SECAM B-Y signal (0~31)	16
2	S YDL	Time delay compensation of SECAM (0: off 1: on)	0
3	S BPG	Time delay option of SECAM BGP (0~3)	0

3) Page SERVCJ3

No.	Name	Explanation	
0	IC	Option of decoding CMOS chip (M61260/M61264/M61266)	M61264
1	SEA CHACK	Checking of automatic channel searching when TV set is turned on. (0: no 1: yes)	1
2	CAL	Option of calendar (1: yes/ 0: no)	1
3	GAME	Option of game (0: no /1: yes)	1
4	ZOOM	Option of ZOOM (1: yes/ 0: no)	1
5	LOCK	Option of child lock (1: yes/ 0: no)	0
6	CURT	Option of screen stretching (0: no / 1: on / 2: off / 3: both)	3
7	WOO	Option of bass (0: no 1: base switch 2: digital control)	0
8	SAVER	Option of screen protection (0: no 1: yes 2: uper line LOGO 3: two line LOGO)	1

4) Page SERVCJ4

0	HP	Left/right of OSD (range: 0~60)	28
1	VP	Up/down of OSD (range: 0~60)	29
2	Z1	Vertical range data when screen is enlarged (range: 0~63)	58
3	Z2	Vertical range data when screen is widened (range: 0~63)	30
4	CURT TIM	Time option of black screen before stretching screen when TV set is turned on (range: 0~30 seconds)	4
5	PWM	Volume option (0: inner volume control;, 1: 1-circuit PWM output; 2:2-circuit PWM number, 3: IC control of acoustics)	0
6	AV	AV option (0: 1-circuit AV 1: 2-circuit AV 2: 1-circuit AV, 1-circuit YUV 3: 2-circuit AV, 1-circuit YUV)	0
7	S SYS	Option of sound system (see note 1)	01111
8	POW	Option of turning-on state (0: direct turning on 1: turning on after standby 2: memory turning on)	2

As shown in the fig., the sound will be opened when each of the corresponding sound system is in 1 position; and closed when in 0.

5) Page SERVCJ5

0	V FREQ	Option of middle frequency: 38.0MHZ、38.9MHZ、39.5MHZ、45.75MHZ、34.47MHZ	38.0
1	V VCO	Tuning of middle frequency: when tuning, AFT of the last line in the menu is in OK mode.	26
2	V GAIN	Scale control of video output (0~7)	7
3	H VCO	Tuning of horizontal frequency (range: 0~7)	3
4	C TR	limiting of color waves (0 ~ 3) (ineffective when tuning in terminal S or YUV input)	0

6) Page SERVCJ6

0	BS SW	black level extending switch: 0: on/1: off	0
1	BS CHAG	(0~3) controlling of extending scale of black level (0~3)	2
2	BS DIS	(0~3) controlling of extending scale of black level (0~3)	0
3	BS GAIN	Gaining switch of black level extending: 0: normal、1: enhance	0
4	GAMMA	(0~3) Correction of curve GAMMA (0~3)	0
5	A SW	limiting switch of automatic contrast: 0: control of automatic contrast, 1: limiting of automatic contrast.	0
6	A GAIN	ABCL gaining switch 0: low, 1: high	0
7	OM DET	Checking of modulation: 0: off, 1: on	0
8	M/N	ption of PAL-N, PAL-M 0: off, 1: on	0

7) Page SERVCJ7

0	D OSD	OSD digit 1: off 0: on	0
1	OSD L	Output scale of OSD digit: 0: low 1: high	1
2	S DOWN	Sync cutting mode: 0: 50%, 1: 40%, 2: 30%, 3: 25%	2
3	R MIX	Adjustment of matrix R: 0: normal 1: enhance	1
4	VS Y DET	Switch of sync time testing: 0: 11.5us 1: 20.5us	0
5	BLACK SCR	Option of screen blackening	1
6	VOL CHOICE	Option of acoustics curves: 0: standard 1: customer	0

8) Page SERVCJ8

0	SUB CONT	Sub-contrast 0~29	18
1	SUB BRI	Sub-brightness 0~105	20
2	SUB COL	Sub-color 0~27	18

3	SUB SHA	Sub-sharpness 0~13	13
4	SUB TI	Sub-tincture 0~27	10
5	SA BR	Screen protection and brightness of blueness in no-signal mode 0~255	138
6	LAN CHOICE	Language option: 0: only English, 1: Chinese, English	1
7	TUNER CHOICE	TUNER OPTION: 0: VS TUNER, 1: FS TUNER	0

9) Page SERVCJ9 (effective only in choosing M61266)

0	Cr ADJ	Adjustment of base level Cr (0~15)	
1	Cb ADJ	Adjustment of base level Cb (0~15)	
2	SIF45 GAIN	Attenuation of output scale of NTSC acoustics (0: 0dB 1: -6dB)	
3	SIF PAL	enhancing of PAL SNR (0: OFF 1: ON)	
4	SIF PAL INV	Polarity switch of SIF PAL (0: NORMAL 1: INVERT)	
5	AMF	Testing switch of weak radio-frequency signal (0: OFF 1: ON)	
6	AMF VTH	Level adjustment of weak radio-frequency signal testing	
7	AMF CUR	reduce filtering current of MF AGC (0: NORMAL 1: CURRENT REDUCED)	
8	AMF HYS	Switch HYS (0: OFF 1: ON)	

10) Page AUTO VCJ: This menu automatically adjusts VIF VCO and S TRAP; and save the adjusted data in EEPROM. Pressing volume key begins the automatic adjustment and it will return to original mode 2~3 seconds after adjustment.

Note 1: the adjusted datum will be shown in SER VCJ5.

Note 2: Adjusting will not affect any keys.

0	S TRAP	
1	VIF VCO	

三、 Explanation of Special Function

1. Enter factory LOGO set: press “LOGO” key will directly enter into adjusting mode; or in “AV” indication for common controller in AV state, successively input 6483 will also enter into adjusting mode.
2. Setting of factory LOGO: There are two lines for factory LOGO, the 1st of which is “Double Happiness” or defined by customer; the 2nd of which is for customer to define (it is available for customer to set not more than 13 characters). And customer may set switch, font, color, up/down position and left/right position. If “LOGO” in the menu is set in “ON” position, the screen will show the equivalent “LOGO” when there is on signal in POWER-ON state.

- The setting menu of factory logo is displayed on two screens, which are available to adjust the 1st line and 2nd line of the LOGO separately. After entering the setting menu, press POS+/POS to

choose different options. Yellow block will appear when displaying item is selected, and then use VOL+/VOL- key to adjust the selected item.

- Adjustment of the selected item: use RECALL key to select the shown item in 1st or 2nd line, when yellow block indicates the current selectable character, use VOL+/VOL key to adjust the selected character.
- It is available to use “0” key to eliminate the current set character.
- On setting menu, press DISPLAY key to indicate adjustment effect, and re-press DISPLAY key to return LOGO set menu. Factory LOGO set is in “to gain what is seen”; and the other items, color, font, position in the displaying lines are completely the same in normal display. So, while adjusting, it is available to see the adjusted effect.
- Setting of items in two lines. Do not set overlapping (even if one line is set in OFF position) so as to prevent abnormal display.
- When adjusting V POS, the menu probably may flash, but this will not affect LOGO display when TV set is turned on.

3. Note: After setting, change screen protection mode through factory setting item. Please see Page SERVCJ3 for details.

6-2、Realization of factory automatic adjustment

Note: There is no any effect for any key in BUS OPEN mode.

Pin 13 of CPU is the automatic adjustment ENABLE terminal; high level should be kept in normal working state. When the terminal is connected to low level, CPU will transfer the control of BUS LINE to automatic equipment (automatically enter into “BUS OPEN” mode); and the automatic equipment will send data to decoding CMOS chip through BUS LINE to implement adjustment. Then it will save the adjusted data in the address of equivalent EEPROM and recover the high level in ENABLE terminal. CPU returns to normal working state. The concerned data of automatic decoding piece and EEPROM address are as follows:

Address of EEPROM: written address: A0H read address: A1H

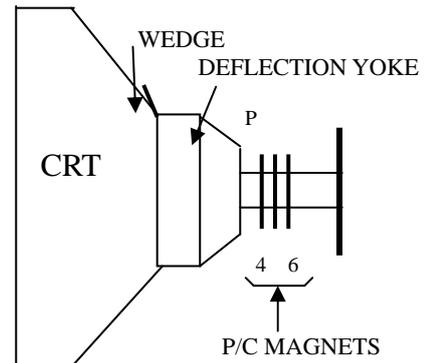

Address of decoding piece: written address: BAH read address: BBH

Name	Sub-address in the equivalent EEPROM	Sub-address in the equivalent decoding piece	Max value
R.DIR	3BH	0BH	7FH
B.DIR	3CH	0CH	7FH
R.CUTOFF	3DH	0DH	FFH
G.CUTOFF	3EH	0EH	FFH
B.CUTOFF	3FH	0FH	FFH

PURITY / CONVERGENCE ADJUSTMENT

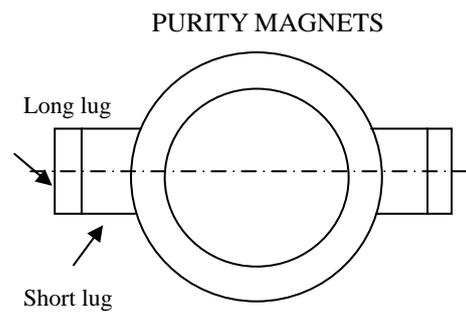

PURITY ADJUSTMENT

1. Demagnetize CRT with the demagnetizer.
2. Loosen the retainer screw of the deflection yoke.
3. Remove the wedges.
4. Input a green raster signal from the signal generator, and turn the screen to green raster.
5. Move the deflection yoke backward.
6. Bring the long lug of the purity magnets on the short lug and position them horizontally. (Fig2)
7. Adjust the gap between two lugs so that the GREEN RASTER will come into the centre of the screen. (Fig. 3)
8. Move the deflection yoke forward, and fix the position of the deflection yoke so that the whole screen will become green.
9. Insert the wedge to the top side of the deflection yoke so that it will not move.
10. Input a crosshatch signal.
11. Verify that the screen is horizontal.
12. Input red and blue raster signals, and make sure that purity is properly adjusted.

P: PURITY MAGNET
 4: 4-POLES (convergence magnets)
 6: 6-POLES (convergence magnets)

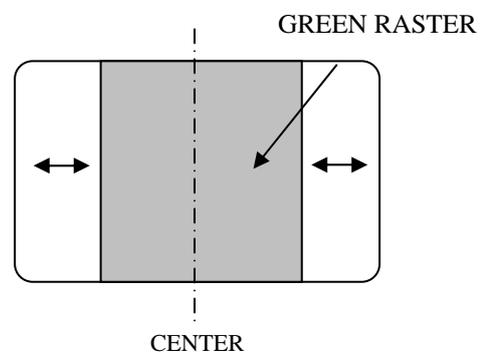

Fig. 1

Bring the long lug over the short lug and position them horizontally.

Fig. 2

(FRONT VIEW)

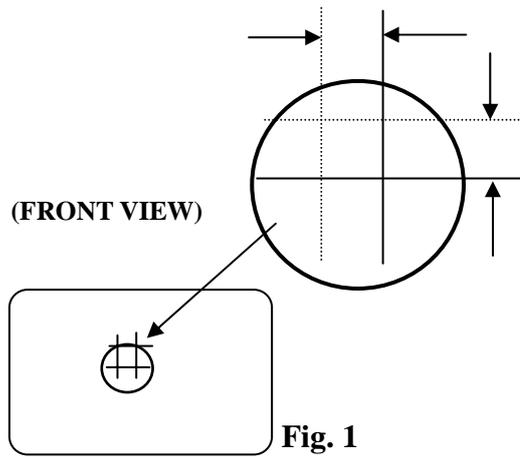

CENTER

Fig. 3

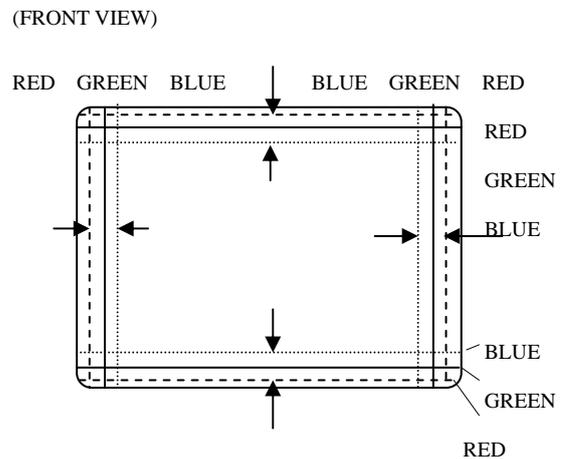

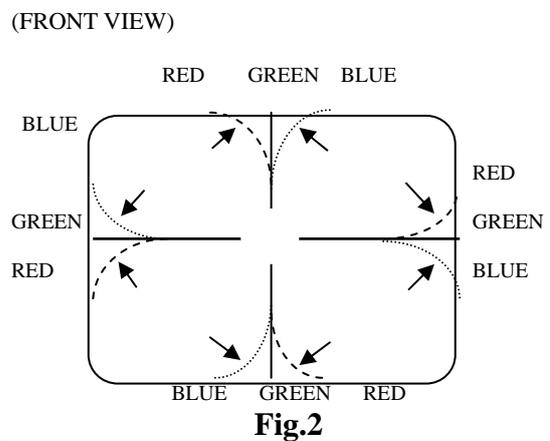

STATIC CONVERGENCE ADJUSTMENT

1. Input a crosshatch signal.
2. Using 4-pole convergence magnets overlap the red and blue lines in the center of the screen (Fig. 1) and turn them to magenta (red/blue).
3. Using 6-pole convergence magnets overlap the magenta (red/blue) and green lines in the center of the screen and turn them to white.
4. Repeat 2 and 3 above, and make the best convergence.

DYNAMIC CONVERGENCE ADJUSTMENT

1. Move the deflection yoke up and down and overlap lines in the periphery. (Fig. 2)
2. Move the deflection yoke left to right and overlap lines in the periphery. (Fig. 3)
3. Repeat 1 and 2 above, and make the best convergence.

After adjustment, fix the wedge at the original position.
Fasten the retainer screw of the deflection yoke.
Fix the 6 magnets with glue.
